

Bio A Study Guide 2 – Biochemistry Test - Enzymes

Enzymes:

1. Define an enzyme – **a molecule (usually a protein), that speeds up a reaction, but doesn't actually get change by the reaction. Once it releases the product, an enzyme can be used again and again.**
2. How does an enzyme work? (you need to know how to read an energy chart)

An enzyme works by lowering the activation energy (we can think of energy as the “cost” required for a reaction to start. An enzyme is like having a coupon, it lowers the cost (or amount of energy) required to start a reaction.

In reality, it does this by increasing the likelihood that a reaction will occur (orients the molecules). Also should know that this is an exothermic reaction (overall energy of product is less than reactant (energy is released). Need to know that activation energy is required regardless of exo or endothermic.

3. Label the following on a diagram:

- the enzyme, substrate, active site, enzyme-substrate complex, products and competitive inhibitor
