The Creation of Markets for Ecosystem Services in the United States Mattijs van Maasakkers, 2016-11-01 The Creation of Markets for Ecosystem Services in the United States is a detailed analysis of the most advanced efforts to create markets for ecosystem services in the United States With the help of in depth case studies of three well known attempts to create such markets in the Chesapeake Bay watershed the Ohio River basin and the Willamette River basin the book explains why very few of these markets have actually succeeded even after close to two decades of much scholarly enthusiasm significant federal funding and concerted efforts by NGOs government agencies and private businesses Based on interviews policy analysis and participatory observation three features of markets for ecosystem services emerge as particularly problematic First the logic of displacement or the idea that particular elements of an ecosystem can be separated and traded across landscapes or watersheds runs counter to political interests environmental beliefs and people's connections to specific places The second problem is that of measurement Quantification methods embed a range of often contentious assumptions and decisions about what counts when restoring ecosystems The third problem is related to participation in environmental decision making

Nuclear Corrosion Science and Engineering Damien Feron, 2012-02-21 Corrosion of nuclear materials i.e. the interaction between these materials and their environments is a major issue for plant safety as well as for operation and economic competitiveness Understanding these corrosion mechanisms the systems and materials they affect and the methods to accurately measure their incidence is of critical importance to the nuclear industry Combining assessment techniques and analytical models into this understanding
