open visualization challenges in the geosciences and how certain problems are currently solved using domain specific processing and visualization techniques Conversely readers from the geosciences will gain valuable insight into relevant visualization and interactive processing techniques Subsurface data has interesting characteristics such as its solid nature large range of scales and high degree of uncertainty which makes it challenging to visualize with standard methods It is also noteworthy that parallel fields of research have taken place in geosciences and in computer graphics with different terminology when it comes to representing geometry describing terrains interpolating data and example based synthesis of data The domains covered in this book are geology digital terrains seismic data reservoir visualization and CO2 storage The technologies covered are 3D visualization visualization of large datasets 3D modelling machine learning virtual reality seismic interpretation and multidisciplinary collaboration People within any of these domains and technologies are potential readers of the book
