## General Introduction

Standard Motor Products, Inc. Greenville Operations (SMP) is a registered TS-16949 facility. SMP has earned a reputation for providing products of consistent quality, competitive prices and flexible production scheduling capacity. Our ability to maintain this reputation greatly depends on the quality of the production materials purchased from our suppliers. For this reason, SMP considers its suppliers valuable assets for the achievement of quality objectives.

Suppliers with short lead times, competitive prices and flexible shipping abilities enable SMP to offer customers the dynamic partnership they have come to expect. Through long term, constructive relationships with suppliers, SMP continuously looks for opportunities to improve the flow of material and information, and ultimately to reduce costs and lead times. Suppliers to SMP must have a commitment to product quality and an understanding of the associated cost of poor quality when delivered to customers.

Our goal is to work closely with both new and existing suppliers to ensure that the quality level of products and services provided by each supplier meet Standard Motor Products, Inc. specifications, requirements, expectations, and satisfaction.

We have set our supplier goals to zero defects and 100% on time delivery, and with cooperation and open communication with our suppliers, we can achieve these goals. This manual is a significant step in developing an open line of communication, by defining our quality and responsiveness expectations

### 1 Scope

This Supplier Quality Manual describes the supplier quality system implemented and maintained by Standard Motor Products, Inc. Greenville to meet the requirements of ISO/TS16949: 2009.

This manual will apply to all suppliers of Standard Motor Products, Inc. Greenville. (SMP), including distributors of catalog and "shelf" items. Compliance to the requirements within this manual as well as to the general terms and conditions of Purchase Orders is mandatory for all suppliers.

**It is the user's responsibility to assure that only the latest revision of this manual is used.**

### 2 SMP Quality Policy

SMP Greenville Management Team, with executive responsibility, has defined the organization's quality policy and commitment to quality as follows:

- **TOTAL CUSTOMER SATISFACTION** – We ensure total customer satisfaction, focused on understanding and satisfying our customer's needs.
- **CONTINUOUS IMPROVEMENT** – We will continuously improve products, processes and service through investigation, analysis, development, training and implementation of practices that will continually place SMP above our competitors.
- **EMPLOYEE EMPOWERMENT** – All employees are empowered to perform an effective and efficient role in controlling the quality of products and services provided.

**The Quality Calibration Handbook** Jay L. Bucher, 2007-01-01 If a business expects to be a player in their market segment their products must have the quality expected by their customers This can only be accomplished with test equipment that produces repeatable accurate and traceable measurements and or outputs Without a quality calibration system in place this cannot and will not happen This book is about how to design implement maintain and continuously improve a quality calibration system with all the required documentation traceability and known uncertainty for each and every item of test equipment owned and used by any company large or small It will benefit companies that want to implement a program and also those that already have one in place Some industries have tighter requirements than others on how they treat calibration some are more specific about how their standards are read while being vague about what is needed to meet calibration Is there one tried and true quality calibration system that every organization can use as a foundation for its personalized program There certainly is and The

Quality Calibration Handbook describes it By using the quality calibration system outlined and demonstrated any organization can put together its own version to meet its specific requirements and or regulations Quality calibration systems are the very foundation for improving research and development R D production and quality assurance arenas through accurate reliable and traceable calibrations of their test equipment By ensuring the calibration of test equipment used in the production of genetic identity kits used by law enforcement at crime scenes the guilty are often caught and the innocent exonerated Calibrated test equipment used in support of the airline and automotive industries helps prevent disasters At pharmaceutical companies calibration technicians quietly lay the foundation for quality treatments that help keep us healthy cure diseases and sometimes prevent death This book explains why a quality calibration system can be the difference between life and death success and failure and most important to shareholders and boards of directors profit and loss

**Total Quality Measurement in the Oil Industry** J.D. Symonds, 2012-12-06 1 Oxford and Webster's dictionaries 2 give transatlantic agreement in English with a common definition for Quality as degree of excellence Compared with the many words taken up by other authors definitions this is remarkably brief and no doubt unsatisfactory to many people Yet if degree means a stage in an ascending or descending series in intensity or in amount then measurement is by definition explicitly required if terms such as quality level good quality high quality etc are to have any real meaning Using measurement is inherent in the methods of all the major writers on the achievement of business improvement through quality Results from measurements allow improvement by using tools commonly grouped under the heading Statistical Process Control SPC Results also form part of the judging criteria of Total Quality Management TQM models such as the Malcolm Baldrige National Quality Award in the USA and the more recent European Quality Award

Future revisions of the ISO 9000 series of quality management system standards will specifically require measurement of defects. However, it is not easy for quality professionals or line managers to find examples of what they should measure and how to do it in their own particular functions in their own particular industries. Case studies always seem to refer to others.
