Identifies and evaluates the psychological choices implicit in the rules of evidence Evidence law is meant to facilitate trials that are fair accurate and efficient and that encourage and protect important societal values and relationships In pursuit of these often conflicting goals common law judges and modern drafting committees have had to perform as amateur applied psychologists Their task has required them to employ what they think they know about the ability and motivations of witnesses to perceive store and retrieve information about the effects of the litigation process on testimony and other evidence and about our capacity to comprehend and evaluate evidence These are the same phenomena that cognitive and social psychologists systematically study The rules of evidence have evolved to restrain lawyers from using the most robust weapons of influence and to direct judges to exclude certain categories of information limit it or instruct juries on how to think about it Evidence law regulates the form of questions lawyers may ask filters expert testimony requires witnesses to take oaths and aims to give lawyers and factfinders the tools they need to assess witnesses reliability But without a thorough grounding in psychology is the common sense of the rulemakers as they create these rules always or even usually correct And when it is not how can the rules be fixed Addressed to those in both law and psychology The Psychological Foundations of Evidence Law draws on the best current psychological research based knowledge to identify and evaluate the choices implicit in the rules of evidence and to suggest alternatives that psychology reveals as better for accomplishing the law s goals Reports of Cases Adjudged in the Supreme Court of Pennsylvania Pennsylvania.
