

Biological 'Fitness' and Physiology 11

Late 19th-Century Evolutionism

1881 article: *Surviving at the Front*

Introduction:

According to Darwin's evolutionary theory, individuals belonging to the same species have different 'fit' levels in different periods and when conditions changed it is natural and expected organisms would adapt. The significance of the Darwinian perspective on evolutionary change was that organisms adapt to the changes in the natural conditions more gradually than what had previously been assumed. The fact that it is natural for organisms to adapt is not surprising, but what is quite new and novel.

Significance of the article: theories and proposed mechanisms:

1. Organisms with favourable traits
2. Individuals belonging to species in which greater numbers of individuals are adapted more
3. Traits [as biological fitness and survival ability](#) are natural selection
4. Traits [as biological fitness and survival ability](#) are natural selection and organisms adapt
5. Traits as survival traits that are passed through generations
6. Individuals adapt to the natural conditions
7. Adapt to the natural conditions and survival mechanisms
