The Law of Medicare and Medicaid Fraud and Abuse Timothy S. Jost, Sharon L. Davies, 2000 Vitamin D and Cancer Donald L. Trump, Candace S. Johnson, 2010-12-09

Substantial data indicate the broad importance of vitamin D based signaling in normal human physiology and the broad effects of vitamin D deficiency Vitamin D may play a role not only in the control of bone and mineral metabolism but also appears to be involved in immune function cardiovascular health thrombosis and vasculogenesis and neuromuscular function Considerable epidemiologic data demonstrate that low vitamin D serum levels occur very commonly in normal adult populations and that vitamin D deficiency is associated with an enhanced risk of cancer death from lung prostate head neck colorectal and other gastrointestinal cancers In addition preclinical data provide evidence that calcitriol and other active analogues of calcitriol have anti proliferative pro differentiative pro apoptotic and anti angiogenic activity in numerous in vitro and in vivo models It is quite clear that while it requires high exposure to calcitriol to induce these effects such exposure can be readily achieved when high dose intermittent therapy is given
