Microbial Interaction with Banana: Mechanisms, Symbiosis, and Integrated Diseases Control Huigang Hu,Jian Chen,Yunfeng Li,Sijun Zheng,Li Xundong,Tingting Bai,2024-04-15 Banana is one of the most important fruits worldwide and a staple food for millions of people in developing countries However vegetative propagation of commercial cultivars results in a limited genetic background making banana plants susceptible to disease infection Conventional chemical control is typically inefficient owing to the plant s inability to absorb significant quantities of chemicals in a short period of time The overuse leads to chemical reagent resistance and a rise in environmental contamination Furthermore the inappropriate chemical application might result in a relatively high quantity of residues on banana fruits posing human health risks through consumption As a result new technology and discoveries for integrated banana plant protection are urgently required
