Privilege and Diversity in the Academy Frances A. Maher, Mary Kay Thompson Tetreault, 2013-10-18 Over the past several decades, higher education has been transformed by the entry of faculty of color and women into the university system. Through detailed institutional ethnographies of three very different universities, *Privilege and Diversity in the Academy* explores how this diversification has dismantled and reconfigured relationships of privilege and diversity in higher education. Authors Maher and Tetreault use examples from a top-ranked private university, a comprehensive urban university, and a major public university to illustrate how privilege is enacted, resisted, and transformed as changes occur in the student bodies and faculties of these schools. In their analyses, they identify the institutional structures that facilitate the success of a diverse faculty and make valuable observations about patterns of institutional change and resistance.

Computer Support for Collaborative Learning Gerry Stahl, 2023-01-13 Computer Support for Collaborative Learning (CSCL) is a field of study centrally concerned with meaning and the practices of meaning making in the context of joint activity and the ways in which these practices are mediated through designed artifacts. This volume includes abstracts of papers that were presented during interactive poster sessions at CSCL 2002. Documenting an extremely heterogeneous productive phase of inquiry with broad social consequences, these proceedings reflect the current state of CSCL research, particularly in North America and Western Europe.

Questioning Technology Karen Ann Ferneding, 2003 This book revisits current technocentric educational reform policy and examines the meaning of educational reform within the context of a technological society and globalized market economy. Having colonized the politics of educational reform, technocentrism has narrowed the social space of educational reform discourse by invalidating alternative social visions germane to the tradition of social justice and the development of a civic society. This book interrogates current technocentric discourse through the voices of educators who engage in the practice of questioning technology and raises significant issues regarding the dominance of a technology-based reform agenda, techno-utopianism as a dominant social vision, and the positioning of teachers within school cultures reconfigured by control technologies and performativity. Educators need to create a deliberative approach to technology adoption for only by assuming a more questioning stance toward the adoption of technological innovations can we hope to avoid technological determinism and take responsibility for the consequences of our inventions.

CIS Index to Publications of the United States Congress Congressional Information Service,1996 **The Money Myth** W. Norton Grubb,2009-01-15 Can money buy high quality education Studies find only a weak relationship between public school funding and educational outcomes In The Money Myth W Norton Grubb proposes a powerful paradigm shift in the way we think about why some schools thrive and others fail The greatest inequalities in America s schools lie in factors other than fiscal support Fundamental differences in resources other than money for example in leadership instruction and tracking policies explain the deepening divide in the success of our nation s schoolchildren The Money Myth establishes several principles for a bold new approach to education reform Drawing on a national longitudinal dataset collected over twelve years Grubb makes a crucial distinction between simple resources and those compound complex and abstract resources that cannot be readily bought Money can buy simple resources such as higher teacher salaries and smaller class sizes but these resources are actually some of the weakest predictors of educational outcomes On the other hand complex resources pertaining to school practices are astonishingly strong predictors of success Grubb finds that tracking policies have the most profound and consistent impact on student outcomes over time Schools often relegate low performing students particularly minorities to vocational remedial and special education tracks So even in well funded schools resources may never reach the students who need them most Grubb also finds that innovation in the classroom has a critical impact on

student success Here too America s schools are stratified Teachers in underperforming schools tend to devote significant amounts of time to administration and discipline while instructors in highly ranked schools dedicate the bulk of their time to engaged learning using varied pedagogical approaches Effective schools distribute leadership among many instructors and administrators and they foster a sense of both trust and accountability These schools have a clear mission and coherent agenda for reaching goals Underperforming schools by contrast implement a variety of fragmented reforms and practices without developing a unified plan This phenomenon is perhaps most powerfully visible in the negative repercussions of No Child Left Behind In a frantic attempt to meet federal standards and raise test scores quickly more and more schools are turning to scripted off the shelf curricula These practices discourage student engagement suppress teacher creativity and hold little promise of improving learning beyond the most basic skills Grubb shows that infusions of money alone won t eradicate inequality in America s schools We need to address the vast differences in the way school communities operate By looking beyond school finance The Money Myth gets to the core reasons why education in America is so unequal and provides clear recommendations for addressing this chronic national problem

An Air War with Cuba Daniel C.
