Managing Biosecurity Across Borders:

Managing Biosecurity Across Borders Ian Falk, Ruth Wallace, Marthen L. Ndoen, 2011-07-03 Managing biosecurity is everybody's business. The book's multi-site multi-sectoral research contributes to an holistic evidence-based strategy for managing plant biosecurity in complex contexts. The intent is to provide a starting point for all stakeholders in the biosecurity endeavor: policy personnel at all levels of governance, planners and regional developers, non-government organizations, community groups and individuals to plan localized strategies that fit national needs and constraints and the way people live their lives. In putting forward a strategy we draw on many disciplines and cultural perspectives on a problem that is fundamentally a multidisciplinary and global issue. At the same time the contributing researchers remain aware that such a strategy is always subject to local contextual factors and influences indigenous and local knowledge and culture and is regarded as a tool for planning always subject to change.

Biosecurity Andrew Dobson, Kezia Barker, Sarah L. Taylor, 2013-08-15 Biosecurity is the assessment and management of potentially dangerous infectious diseases, quarantined pests, invasive alien species, living modified organisms and biological weapons. It is a holistic concept of direct relevance to the sustainability of agriculture, food safety and the protection of human populations including bio-terrorism, the environment and biodiversity. Biosecurity is a relatively new concept that has become increasingly prevalent in academic policy and media circles and needs a more comprehensive and inter-disciplinary approach to take into account mobility, globalisation and climate change. In this introductory volume biosecurity is presented as a governance approach to a set of concerns that span the protection of indigenous biological organisms, agricultural systems and human health from invasive pests and diseases. It describes the ways in which biosecurity is understood and theorized in different subject disciplines including anthropology, political theory, ecology, geography and environmental management. It examines the different scientific and knowledge practices connected to biosecurity governance including legal regimes, ecology, risk management and alternative knowledges. The geopolitics of biosecurity is considered in terms of health, biopolitics and trade governance at the global scale. Finally biosecurity as an approach to actively secure the future is

assessed in the context of future risk and uncertainties such as globalization and climate change *Global Health Security* Anthony J. Masys, Ricardo Izurieta, Miguel Reina Ortiz, 2020-01-01 With our highly connected and interdependent world the growing threat of infectious diseases and public health crisis has shed light on the requirement for global efforts to manage and combat highly pathogenic infectious diseases and other public health crisis on an unprecedented level Such disease threats transcend borders Reducing global threats posed by infectious disease outbreaks whether naturally caused or resulting from a deliberate or accidental release requires efforts that cross the disaster management pillars mitigation preparedness response and recovery This book addresses the issues of global health security along 4 themes Emerging Threats Mitigation Preparedness Response and Recovery Exploring the Technology Landscape for Solutions Leadership and Partnership The authors of this volume highlight many of the challenges that confront our global security environment today These range from politically induced disasters to food insecurity to zoonosis and terrorism More optimistically the authors also present some advances in technology that can help us combat these threats Understanding the challenges that confront us and the tools we have to overcome them will allow us to face our future with confidence **Encyclopedia of Agriculture and Food Systems** Neal K. Van Alfen, 2014-07-29 Encyclopedia of Agriculture and Food Systems Second Edition Five Volume Set addresses important issues by examining topics of global agriculture and food systems that are key to understanding the challenges we face Questions it addresses include Will we be able to produce enough food to meet the increasing dietary needs and wants of the additional two billion people expected to inhabit our planet by 2050 Will we be able to meet the need for so much more food while simultaneously reducing adverse environmental effects of today s agriculture practices Will we be able to produce the additional food using less land and water than we use now These are among the most important challenges that face our planet in the coming decades The broad themes of food systems and people agriculture and the environment the science of agriculture agricultural products and agricultural production systems are covered in more than 200 separate chapters of this work The book provides information that serves as the foundation for discussion of the food and environment challenges of the world An international group of highly respected authors addresses these issues from a global perspective and provides the background references and linkages for further exploration of each of topics of this comprehensive work Addresses important challenges of sustainability and efficiency from a global perspective Takes a detailed look at the important issues affecting the agricultural and food industries today Full colour throughout FAO Biosecurity Toolkit Food and Agriculture Organization of the United Nations. Integrating Biological Control into Conservation Practice Roy van Driesche, Daniel Simberloff, Bernd Blossey, Charlotte Causton, Mark Hoddle, Christian O. Marks, Kevin M. Heinz, David L. Wagner, Keith D. Warner, 2016-05-17 Invasive species have a critical and growing effect upon natural areas They can modify degrade or destroy wildland ecosystem structure and function and reduce native biodiversity Landscape level solutions are needed to address these problems Conservation biologists seek to limit such damage and restore ecosystems using a variety of approaches One such approach is biological control the deliberate importation and establishment of specialized natural enemies which can address invasive species problems and which should be considered as a possible component of restoration Biological control can be an effective tool against many invasive insects and plants but it has rarely been successfully employed against other groups Safety is of paramount concern and requires that the natural enemies used be specialized and that targeted pests be drivers of ecological degradation While modern approaches allow species to be selected with a high level of security some risks do remain However as in all species introductions these should be viewed in the context of the risk of failing to reduce the impact of the invasive species This unique book identifies the balance among these factors to show how biological control can be integrated into ecosystem restoration as practiced by conservation biologists Jointly developed by conservation biologists and biological control scientists it contains chapters on matching tools to management goals tools in action measuring and evaluating ecological outcomes of biological control introductions managing conflict over biological control and includes case studies as well as an ethical framework for integrating biological control and conservation practice Integrating Biological Control into Conservation Practice is suitable for graduate courses in invasive species management and biological control as well as for research scientists in government and non profit conservation organizations

OECD Food and Agricultural Reviews Innovation, Agricultural Productivity and Sustainability in Australia OECD, 2015-08-04 Australia s agriculture and food industries are well placed to contribute to the economy s future growth given the robust prospects of global food demand and the continuing high

international competitiveness of these sectors *Invasive Species Impact* Raina Mooncrest, AI, 2025-03-10 *Invasive Species Impact* explores the escalating global challenge posed by non native species to ecosystems biodiversity and food production It emphasizes how these biological invasions disrupt ecological stability and exacerbate threats to agriculture For example the book highlights how invasive species can alter nutrient cycling and pollination processes leading to significant economic losses for farmers and policymakers The comprehensive approach of *Invasive Species Impact* begins with foundational concepts of invasion ecology and progresses to examine pathways of introduction such as ballast water and international trade Case studies from diverse biomes illustrate the far reaching impacts on native species and ecosystem resilience The book uniquely connects the ecological implications of invasive species with broader issues of global trade and climate change highlighting the need for collaborative interdisciplinary solutions The book leverages peer reviewed research data and real world case studies to provide valuable insights for students researchers and policymakers It addresses the underlying drivers and consequences of biological invasions offering a holistic understanding of this complex issue and its effects on conservation management agricultural practices and policy decisions
