Escalator Service Manual:

A Reasonable Person Walter Davis, 2010-05-14 In *A Reasonable Person* Mark Dorsey applies all of his legal skills in a parade of trials representing clients being sued in quest of insurance company dollars. The story centers on Dorsey's attempts to find harmony in his professional and personal lives. While facing a never ending trial schedule he engages in dramatic relationships with his loving and supportive wife, his childhood sweetheart who has become a demanding mistress, and his gifted and engaging but somewhat irresponsible partner. The story focuses on a series of cases, each of which is an absorbing little drama, most of which are played out in courtrooms. As he meets with various challenges in his professional role, Mark also grapples with personal conflicts which threaten to destroy his marriage and his firm. As he is on the verge of making a potentially ruinous decision, a catastrophe occurs forcing him to see clearly what he must do. *A Reasonable Person* reveals the world of insurance litigation in which justice may prevail if it is not prevented by mendacity, prevarication, or incompetence. We see how attorneys who have mastered the intricacies of insurance law and are willing to make the effort to apply them will succeed on behalf of their clients. But as Mark Dorsey has discovered, achieving victory as a hired gun in the courtroom is not always gratifying.

Information Technology and Intelligent Transportation Systems L.C. Jain, X. Zhao, V.E. Balas, 2020-03-18 Intelligent transport systems, from basic management systems to more application oriented systems, vary in the technologies they apply. Information technologies, including wireless communication, are important in intelligent transportation systems, as are computational technologies, floating car data, floating cellular data, sensing technologies, and video vehicle detection. Theoretical and application technologies, such as emergency vehicle notification systems, automatic road enforcement, and collision avoidance systems, as well as some cooperative systems, are also used in intelligent transportation systems. This book presents papers selected from the 128 submissions in the field of information technology and intelligent transportation systems received from 5 countries. In December 2019, Chang'an University organized a round table meeting to discuss and score the technical merits of each selected paper, of which 23 are included in this book. Providing a current overview of the subject, the book will be of interest to all those working in the field.
