Perspectives on Bias in Mental Testing Cecil Reynolds,2013-11-11 The cultural test bias hypothesis is one of the most important scientific questions facing psychology today Briefly the cultural test bias hypothesis contends that all observed group differences in mental test scores are due to a built in cultural bias of the tests themselves that is group score differences are an artifact of current psychometric methodology If the cultural test bias hypothesis is ultimately shown to be correct then the 100 years or so of psychological research on human differences or differential psychology the scientific discipline underlying all applied areas of human psychology including clinical counseling school and industrial psychology must be reexamined and perhaps dismissed as confounded contaminated or otherwise artifactual In order to continue its existence as a scientific discipline psychology must confront the cultural test bias hypothesis from the solid foundations of data and theory and must not allow the resolution of this issue to occur solely within and to be determined by the political Zeitgeist of the times or any singular work no matter how comprehensive In his recent volume Bias in Mental Testing New York Free Press 1980 Arthur Jensen provided a thorough review of most of the empirical research relevant to the evaluation of cultural bias in psychological and educational tests that was available at the time that his book was prepared Nevertheless Jensen presented only one perspective on those issues in a volume intended not only for the scientific community but for intelligent laypeople as well

Cohen,2013-03-09 As you read this you are probably unaware of how your left foot feels in your shoe Although your brain was receiving sensory input from this foot you were not aware of your foot because you were reading and not attending to it However this discussion led you to move your attention to your left foot and to become aware of it When I was a medical student I saw a patient who was unaware of both the left side of his body and the left side of his environment Unlike people in normal health who when instructed can become aware of the left side of the body this patient could not be made aware of his left arm or the left side of his environment The patient s defect was so profound that despite being hungry he was unaware of food on the left side of his tray and did not recognize that his left arm belonged to him This left sided body and spatial unawareness could not be accounted for by a primary sensory defect Although I knew that this man suffered from a large right hemisphere stroke I did not know the brain mechanisms that accounted for this profound example of unawareness It was not until I had almost completed my neurology training in 1969 that I was able to return to this problem At that time most neuropsychological research was directed at understanding the language disorders associated with brain disease **TLA Video & DVD Guide 2004** David Bleiler,2003-10-24 This is the absolutely indispensable guide to worthwhile cinema It includes over 10 000 entries on the best of film and video that a real film lover might actually want to see *Human Resource Management* Jean M.
