

## Reinforcement to Suspended Slabs

For alternative loading details for suspended slabs, it is advised that the user should refer to the relevant BS code of practice. Alternative reinforcement details can be used in the top of slabs for loading details not specifically covered.

When a slab is continuous over a wall, all ground reaction reinforcement should be placed on the top of the wall to reduce the risk of cracking.

| Slab thickness (mm) | Slab span (mm) | Reinforcement |
|---------------------|----------------|---------------|
| 100                 | 1000           | 100           |

For slabs to the use of B members, the following table gives the minimum slab thickness. The minimum thickness is the depth of the span and is based on the minimum slab. Slabs should be designed where they are not continuous. The table assumes that the minimum slab thickness is 100 mm. Concrete and reinforcement strength is given below.

| Slab thickness (mm) | Slab span (mm) | Reinforcement |
