

## HOW TO MAKE

# Cold Brew Coffee

### Grind Coffee Beans

Grind the coffee to a medium grind size. Resist the advice to grind it coarse as many other brewing guides recommend.

### Add Water

Add pure water. Since we don't boil it, we need great quality water, preferably from a spring. Stir thoroughly, until all the grounds sink to the bottom.

### Put it In the Fridge

You can use room temperature, but I recommend brewing at colder temperatures in order to avoid contamination.

### Let It Steep

Steep for minimum 12 hours for a complete extraction. The longer you steep the stronger the coffee will be, without negative effects.

### Strain It

Strain the coffee using a fine mesh.

If you used a cold brew coffee pod, this step is not needed.

### Decant

Let the strained coffee to decant for another hour or so. This will help the sediments to settle at the bottom of the jar.

Transfer in another jar carefully, ensuring you don't agitate the brew.

### Drink It

Add ice cubes and milk and drink.

You can also freeze the cold brew coffee into ice cubes and add milk over it for a stronger beverage.

### Refrigerate

Cold brew is quite tedious to prepare. Unlike hot brew though, you can store it in the fridge for long time.

If you made a large batch, store it in the fridge for up to 14 days.
