Equipment for Buildings covers both active controls like air conditioners and heaters as well as passive controls like daylighting and natural ventilation. Because these systems comprise the entire energy use and costs of a building's life, the book stresses the importance of sustainability considerations during the design process by both architects and builders. Authored by two leading green design educators, MEEB provides the most current information on low energy architecture including topics like Context, comfort and environmental resources, Indoor air quality and thermal control, Illumination, acoustics and electricity, Fire protection, signal systems and transportation. Occupant comfort and building usability are the most critical factors in the success of a building design and with environmental concerns mounting, it's becoming more and more important to approach projects from a sustainable perspective from the very beginning. As the definitive guide to environmental control systems for over 75 years, Mechanical and Electrical Equipment for Buildings is a complete resource for students and professionals alike.

People Flow in Buildings Marja-Liisa Siikonen, 2021-10-04. Discover how to measure, control, model and plan people flow within modern buildings with this one-stop resource from a leading professional. People Flow in Buildings delivers a comprehensive and insightful description of people flow analysis with software-based tools. The book offers readers an up-to-date overview of mathematical optimization methods used in control systems and transportation planning methods used to manage vertical and horizontal transportation. The text offers a starting point for selecting the optimal transportation equipment for new buildings and those being modernized. It provides insight into making passenger journeys pleasant and smooth while providing readers with an examination of how modern trends in building usage like increasingly tall buildings and COVID-19 effect people flow planning in buildings. People Flow in Buildings clearly defines the terms and symbols it includes and then moves on to deal with the measurement, control, modelling and planning of people flow within buildings of all kinds. Each chapter contains an introduction describing its contents and the background of the subject. Included appendices describe measured passenger data and performed analyses. Readers will also benefit from the inclusion of a thorough introduction to people counting methods including counting technology inside and outside buildings, passenger traffic components and manual people counting. An examination of the passenger arrival process in building including the Poisson arrival process and probability density function and passenger arrivals in batches. A consideration of daily vertical passenger traffic profiles including two-way traffic profiles and the effects of inter-floor traffic. An exploration of people flow solutions including stairs, escalators and elevators with collective and destination group control systems as well as double-deck and multicar system. People flow calculation and simulation models. Elevator planning with ISO simulation method. Elevator planning and evacuation of tall buildings. Perfect for software designers in the private sector and academia. People Flow in Buildings will also earn a place in the libraries of elevator consultants, manufacturers and architects who seek a one-stop reference for transportation devices from a functional and

design perspective as opposed to a hardware perspective
