**How Do Banking Crises Affect Bilateral Exports?** Mr.Youssouf Kiendrebeogo,2013-06-19 This paper investigates whether banking crises are associated with declines in bilateral exports We first develop a simple open economy model in which banking crises translate into negative liquidity shocks leading to collapses in exports through supply side and demand side shocks We then estimate a gravity model using a sample of developed and developing countries over the period 1988 2010 The results suggest that crisis hit countries experience lower levels of bilateral exports particularly in developing countries where supply side shocks are found to be relatively more important than demand shocks In developing countries exports of manufactured goods are disproportionately hurt by

banking crises and this negative effect is stronger in industries relying more on external finance These findings are robust to correcting for potential endogeneity to changes in the sample and to alternative estimation methods

Green Outcomes in the Real World Peter McManners, 2016-04-15 Over the last three decades the world economy has grown strongly on the back of globalization supported by the policies of free trade open markets and privatisation Support has also grown for the concept of sustainability meeting the needs of the present without compromising the ability of future generations to meet their own needs But as the Earth's systems come under increasing strain the inherent conflict between sustainability and globalization has been exposed Green Outcomes in a Real World examines the shift in thinking required to reconcile these two important areas of policy In this ground breaking book Peter McManners has coined the term Proximization to define a new policy framework The principles of Proximization are sustainability subsidiarity primacy of the state and market economics and the application of these familiar concepts towards a sustainable globalised world is novel and different The author argues that adherence to the principles of proximization will return world society to a stable natural order and will mean changes Global commodity flows will reduce and barriers to migration will increase National governments will demand more control over their finances leading to restrictions on capital flows Indeed Peter believes that an element of selfish determination is needed The new world order will be sustainable by design Global organisations such as the UN national governments and global corporations will have to understand and apply a different paradigm The arguments in this book do not reflect the idealism or even naivety of some of the green movement This book is about hard edged reality presented by an author with huge experience and a deep understanding of the business perspective It will appeal to a wide range of professionals involved in setting policy and future direction for businesses governments and non governmental bodies as well as to those with an academic interest in business economics social and environmental issues and public policy
