comprise a family of car engines derived from experiments in the early 1960s by Felix Wankel a German engineer Over the
years displacement has been increased and turbocharging has been added Wankel engines can be classified by their
geometric size in terms of radius rotor center to tip distance also the median stator radius and depth rotor thickness and
offset crank throw eccentricity also 1 4 the difference between stator s major and minor axes These metrics function similarly
to the bore and stroke measurements of a piston engine Displacement is 3 3radius offset depth multiplied with the number of
rotors note that this only counts a single face of each rotor as the entire rotor s displacement and is of course incorrect as
there are three faces equivalent to three piston faces per rotor i e equivalent to a three cylinder radial piston motor per rotor
Nearly all Mazda production Wankel engines share a single rotor radius 105 mm 4 1 in with a 15 mm 0 6 in crankshaft offset
The only engine to diverge from this formula was the rare 13A which used a 120 mm 4 7 in rotor radius and 17 5 mm 0 7 in
crankshaft offset Mazda rotary engines have a reputation for being relatively small and powerful at the expense of poor fuel
efficiency They started to become popular with kit car builders hot rodders and in light aircraft because of their light weight
