EARTH'S SYSTEMS: WATER CYCLE & FRESH VS. SALTWATER

The water from the tap is HOW OLD?

Read the passage and answer the questions that follow.

The water from the tap is not as old as you think it is. In fact, it is only a few days old. The water cycle is a continuous process that moves water around the Earth. It starts with evaporation, where water turns into vapor and rises into the air. Then, it condenses into clouds. When the clouds get heavy, it rains or snows. The water then falls to the ground and either soaks into the soil or runs off into a body of water. From there, it can evaporate again and start the cycle over.

A Water Droplet's Journey

Follow the path of a water droplet as it moves through the water cycle. Label each stage and write a brief description of what is happening.

Modelling the Water Cycle

Use the materials provided to create a model of the water cycle. Label each part and explain its function.

Freshwater vs. Saltwater

Compare and contrast freshwater and saltwater. Discuss their properties, uses, and how they are affected by the water cycle.
