Light of Other Days Caroline Couper Lovell,1995 The Georgia Coast is one the most intriguing areas of the United States A land of sluggish rivers murkey blackwater swamps and studded with a string of islands it is the home of a special breed of people They are as wild reckless exciting beautiful and contradictory as the land itself One thing is for sure both natives and visitors love it But the story of this land is one that is often known about only in legend and hearsay in stories and novels and even in a few dissertations By focusing on James Hamilton Couper James Bagwell paints a portrait of the Georgia Coast during the late eighteenth century through the middle of the nineteenth century Couper s family was originally from Scotland where the story actually begins but settled on the Georgia Coast When James Hamilton Couper was grown he attended Yale but returned to make a name for himself and his plantation in politics plantation management scientific agriculture archaeology and architecture Bagwell also discusses the role of Couper as a slave owner and of slave life on the plantation But the book is more than about Couper he is simply the pivot of the book The real story here is the Coastal land itself socially economically religiously and politically From the colonial days on the coast through the American Civil War Bagwell has written a compelling story of a most enigmatic land the Georgia Coast *Adaptations* Chris Nelson,2019-08-22 This short book leads the reader on a guided tour of some of the great issues facing us in the 21st century and differing views of the best way to adapt to them Issues relating to global warming climate change and how to respond issues relating to the environmental limits to growth and how to respond displacement of workers by automation and how what to do the high and rising debt ratios of governments and whether to tax the rich the same as everybody else differing views on the role of and need for regulation differing views on the nature and role of democratic government whether well run or synonymous with inefficiency corruption and waste as the purveyors of Reaganomics are still pushing on us 30 years onwards Pride of place among these issues must probably be given to the issue of how best to manage i e slow down climate change This book puts forward two original approaches for dealing with the problem which mightt be considerably cheaper and more easy to apply than a full scale energy transition to renewables by the whole of the economy especially the industrial part of it In my humble opinion all that is required to begin the meet the challenge of climate change is that people of good will be prepared to make sacrifices for the benefit of the whole of society in meeting this challenge My approach may be applied singly or in

combination as follows Respecting the limits to growth giving workers employees more time off from work more leisure time instead of having them produce more material goods with their inevitable by products of greenhouse gases emissions pollution Hastening the movement towards a non polluting post industrial information and service economy accelerating and reinforcing existing underlying trends in the economy away from polluting goods producing industries towards non polluting labour intensive and also skill intensive services providing Since many services cater to are oriented to LEISURE time activities pastimes pursuits e g restaurants hotels resorts and other attractions this strategy may be viewed as a natural complement to the more leisure time for all listed above When it comes to specific industries that produce especially greenhouse pollution intensive products would it be reasonable to expect hope that in a case where pollution and traffic congestion become excessively burdensome on the health and quality of life these industries sacrifice some of their growth profit objectives for the good of the whole locality community society by either re locating or by diversifying their product line into less polluting non polluting but related products such as electric cars and their improvements or even moving into comparable technology intensive areas but producing not cars but renewable energy technologies and their applications as well as clean up after ourselves technologies
