**Story in Children's Lives: Contributions of the Narrative Mode to Early Childhood Development, Literacy, and Learning** Kelli Jo Kerry-Moran, Juli-Anna Aerila, 2019-09-27 This book is based on the power of stories to support children in all areas of their lives. It examines the role narratives can play in encouraging growth in contexts and domains such as personal and family identity, creative movement, memory and self-concept, social relationships, or developing a sense of humor. Each chapter describes innovative and research-based applications of narratives such as movement stories, visual narratives to develop historical thinking, multimodal storytelling, bibliotherapy, mathematics stories, family stories, and social narratives. The chapters elaborate on the strength of narratives in supporting the whole child in diverse contexts, from young children on the autism spectrum improving their social skills at school to four and five-year-olds developing historical thinking to children who are refugees or asylum seekers dealing with uncertainty and loss. Written by accomplished teachers, researchers, specialists, teaching artists, and teacher educators from several countries and backgrounds, the book fills a gap in the literature on narratives. This work delves into the topic of narratives in young children's lives with a breadth of topics and depth of study not found elsewhere. Collectively, the insights of the contributors build a convincing case for emphasizing story across the various disciplines and developmental domains of the early childhood years. The writing style is scholarly yet accessible. Authors used a wide array of visual material to make their points clearer and show the reader what meaningful uses of story look like. Mary Renck Jalongo, Journal and Book Series Editor, Springer, Indiana, PA, USA

**Mind, Brain and Narrative** Anthony J. Sanford, Catherine Emmott, 2012-12-20 Narratives enable readers to vividly experience fictional and non-fictional contexts. Writers use a variety of language features to control these experiences; they direct readers in how to construct contexts, how to draw inferences, and how to identify the key parts of a story. Writers can skilfully convey physical sensations, prompt emotional states, effect moral responses, and even alter the readers' attitudes. *Mind, Brain and Narrative* examines the psychological and neuroscientific evidence for the mechanisms which underlie narrative comprehension. The authors explore the scientific developments which demonstrate the importance of attention, counterfactuals, depth of processing, perspective, and embodiment in these processes. In so doing, this timely

interdisciplinary work provides an integrated account of the research which links psychological mechanisms of language comprehension to humanities work on narrative and style

cognitively informed perspective on literature to offer benefits back to the cognitive sciences Finally the third section literature in cognitive science showcases some of the ways in which literature can be a stimulating object of study and a fertile testing ground for theories and models not only to literary scholars but also to cognitive scientists who here engage with some key questions in cognitive literary studies with the benefit of their in depth scientific knowledge and training

**Narrative Across Media** Marie-Laure Ryan,James Ruppert,John W. Bernet,2004-01-01 Narratology has been conceived from its earliest days as a project that transcends disciplines and media The essays gathered here address the question of how narrative migrates mutates and creates meaning as it is expressed across various media Dividing the inquiry into five areas face to face narrative still pictures moving pictures music and digital media Narrative across Media investigates how the intrinsic properties of the supporting medium shape the form of narrative and affect the narrative experience Unlike other interdisciplinary approaches to narrative studies all of which have tended to concentrate on narrative across language supported fields this unique collection provides a much needed analysis of how narrative operates when expressed through visual gestural electronic and musical means In doing so the collection redefines the act of storytelling Although the fields of media and narrative studies have been invigorated by a variety of theoretical approaches this volume seeks to avoid a dominant theoretical bias by providing instead a collection of concrete studies that inspire a direct look at texts rather than relying on a particular theory of interpretation A contribution to both narrative and media studies Narrative across Media is the first attempt to bridge the two disciplines
