## **National Strategy For Pandemic Influenza Implementation Plan:**

National Strategy for Pandemic Influenza ,2006      *National Strategy for Pandemic Influenza ,2006*      *National Strategy for Pandemic Influenza Implementation Plan A 2020 Reprint* Homeland Security Council,2020-05-09 The National Strategy To Safeguard Against The Danger Of Pandemic Influenza White House outlines the coordinated federal government efforts to prevent and prepare for avian and pandemic flu President Bush directed all relevant federal departments and agencies to take steps to address the threat of avian and pandemic flu Drawing on the combined efforts of government officials and the public health medical veterinary and law enforcement communities as well as the private sector this strategy is designed to meet three critical goals detecting human or animal outbreaks that occur anywhere in the world protecting the American people by stockpiling vaccines and antiviral drugs while improving the capacity to produce new vaccines and preparing to respond at the federal state and local levels in the event an avian or pandemic influenza reaches the United States      National Strategy for Pandemic Influenza Implementation Plan ,2006 Influenza viruses have threatened the health of animal and human populations for centuries Their diversity and propensity for mutation have thwarted our efforts to develop both a universal vaccine and highly effective antiviral drugs A pandemic occurs when a novel strain of influenza virus emerges that has the ability to infect and be passed between humans Because humans have little immunity to the new virus a worldwide epidemic or pandemic can ensue Three human influenza pandemics occurred in the 20th century each resulting in illness in approximately 30 percent of the world population and death in 0.2 percent to 2 percent of those infected Using this historical information and current models of disease transmission it is projected that a modern pandemic could lead to the deaths of 200 000 to 2 million people in the United States alone The animal population serves as a reservoir for new influenza viruses Scientists believe that avian or bird viruses played a role in the last three pandemics The current concern for a pandemic arises from an unprecedented outbreak of H5N1 influenza in birds that began in 1997 and has spread across bird populations in Asia Europe and Africa The virus has shown the ability to infect multiple species including long range migratory birds pigs cats and humans It is impossible to predict whether the H5N1 virus will lead to a pandemic but history suggests that if it does not another novel influenza virus will emerge at some point in the future and threaten an unprotected human population The economic and societal disruption of an influenza pandemic could be significant Absenteeism across multiple sectors related to personal illness illness in family members fear of contagion or public health measures to limit contact with others could threaten the functioning of critical infrastructure the movement of goods and services and operation of institutions such as schools and universities      **National Strategy for Pandemic Influenza** Homeland Security Council (U.S.),2006 This Implementation Plan clarifies the roles and responsibilities of governmental and non governmental entities including Federal State local and tribal authorities and regional national and international stakeholders and provides preparedness guidance for all segments of society Preface      **National Strategy for Pandemic**

**Influenza** Homeland Security Homeland Security Council, 2014-10-31 In the last century three influenza pandemics have swept the globe In 1918 the first pandemic sometimes referred to as the Spanish Flu killed over 500 000 Americans and more than 20 million people worldwide One third of the U S population was infected and average life expectancy was reduced by 13 years Pandemics in 1957 and 1968 killed tens of thousands of Americans and millions across the world Scientists believe that viruses from birds played a role in each of those outbreaks
