Observation

Wall: Yellow
White light: Warm white

Wall: Red
Coloured light: Magenta

Wall: White
Coloured light: Amber

Wall: Yellow
Coloured light: Sky blue

White light that is reflected by a coloured surface takes on the colour of the surface and becomes the predominant colour of light for the whole room. When lighting a coloured wall with coloured light, this effect can be increased, reversed or inverted.

Conclusion

The colour of light in a room is influenced by the decoration of the room. In comparison to diffuse light, direct light increases the effect of the light when illuminating a coloured surface. The effect of a body colour can be intensified by using coloured light of a similar colour. Strong colour contrasts appear brighter for the same illuminance than a weaker colour contrast. Lesser colour contrasts can be perceived better

under brighter lighting. Within closed rooms the effect is hardly perceptible due to the phenomenon of colour constancy.

Applications

In practice, when illuminating coloured surfaces, it is recommended that lighting tests or calculations be carried out.

Coloured accent lighting is used for:

- exhibitions
- trade-fair stands
- sales areas
