Resources in Education, 1998 **The Ancient Alien Question, 10th Anniversary Edition** Philip Coppens, 2021-03 Analyzing historical and archaeological evidence Philip Coppens demonstrates that there is substantial proof that our ancestors were far more technologically advanced than in currently accepted and that certain cultures interacted with non human intelligences. Our ancestors were clearly not alone. Have we been visited by extraterrestrial beings? Did these ancient aliens contribute to the birth of human civilization? Do our ancient monuments contain evidence of their presence? Fifty years after Erich von Däniken posed these questions in *Chariots of the Gods*, Coppens provides clear concise answers to the great historical enigmas in an accessible readable format. This new edition features a preface by Kathleen McGowan along with a new afterword that is the last essay Philip Coppens wrote. Book jacket **Research in Education**, 1971 *Technical Manual and Year Book of the American Association of Textile Chemists and Colorists* American Association of Textile Chemists and Colorists, 1950 **Apparel International**, 1994 *Urban Heat Stress and Mitigation Solutions* Vincenzo Costanzo, Gianpiero Evola, Luigi Marletta, 2021-09-08 This book provides the reader with an understanding of the impact that different morphologies, construction materials and green coverage solutions have on the urban microclimate, thus affecting the comfort conditions of urban inhabitants and the energy needs of buildings in urban areas. The book covers the latest approaches to energy and outdoor comfort measurement and modelling on an urban scale and describes possible measures and strategies to mitigate the effects of the mutual interaction between urban settlements and local microclimate. Despite its relevance, only limited literature is currently devoted to appraising from an engineering perspective the intertwining relationships between urban geometry and fabrics, energy fluxes between buildings and their surroundings, outdoor microclimate conditions and building energy demands in urban areas. This book fills this gap by first discussing the physical processes that govern heat and mass transfer at an urban scale while emphasizing the role played by different spatial arrangements, manmade materials and green infrastructures on the outdoor microclimate. The first chapters also address the implications of these factors on the outdoor comfort conditions experienced by pedestrians and on the buildings energy demand for space heating and cooling. Then based upon cutting edge experimental activities and simulation work, this book

demonstrates current and forthcoming adaptation and mitigation strategies to improve the urban microclimate and its impact on the built environment such as cool materials thermochromic and retroreflective finishing materials and green infrastructures applied either at a building scale or at the urban scale The effect of these solutions is demonstrated for different cities worldwide under a range of climate conditions Finally the book opens a wider perspective by introducing the basic elements that allow fuel poverty raw materials consumption and the principles of circular economy in the definition of a resilient urban settlement
