Factory Physics Wallace J. Hopp, Mark L. Spearman, 2011-08-31 Our economy and future way of life depend on how well American manufacturing managers adapt to the dynamic globally competitive landscape and evolve their firms to keep pace. A major challenge is how to structure the firm's environment so that it attains the speed and low cost of high volume flow lines while retaining the flexibility and customization potential of a low volume job shop. The book's three parts are organized according to three categories of skills required by managers and engineers: basics, intuition, and synthesis. Part I reviews traditional operations management techniques and identifies the necessary components of the science of manufacturing. Part II presents the core concepts of the book, beginning with the structure of the science of manufacturing and a discussion of the systems approach to problem solving. Other topics include behavioral tendencies of manufacturing plants, push and pull production systems, the human element in operations management, and the relationship between quality and operations. Chapter conclusions include main points and observations framed as manufacturing laws. In Part III, the lessons of Part I and the laws of Part II are applied to address specific manufacturing management issues in detail. The authors compare and contrast common problems, including shop floor control, long range aggregate planning, workforce planning, and capacity management. A main focus in Part III is to help readers visualize how general concepts in Part II can be applied to specific problems. Written for both engineering and management students, the authors demonstrate the effectiveness of a rule-based and data-driven approach to operations planning and control. They advance an organized framework from which to evaluate management practices and develop useful intuition about manufacturing systems.

Farm and Factory Daniel Nelson,1995-12-22 Farm and Factory illuminates the importance of the Midwest in U S labor history America s heartland often overlooked in studies focusing on other regions or particular cities or industries has a distinctive labor history characterized by the sustained simultaneous growth of both agriculture and industry Since the transfer of labor from farm to factory did not occur in the Midwest until after World War II industrialists recruited workers elsewhere especially from Europe and the American South The region s relatively underdeveloped service sector shaped by the presumption that goods were more desirable than service ultimately led to agonizing problems of adjustment as agriculture and industry evolved in the late twentieth century **Johnson's Universal Cyclopædia** ,1890 Energy Research Abstracts ,1993 **Johnson's (revised) Universal Cyclopaedia** ,1886 Books and Pamphlets, Including Serials and Contributions to Periodicals Library of Congress.
