

THE PRACTICE OF Well Test Interpretation

Golden Rules:

- 1 Well Test Interpretation (WTI) is much more than Pressure Transient Analysis (PTA).
- 2 If it happens suddenly... it is not a reservoir effect.
- 3 The longer the flow period, the more information you can extract from the buildup.
- 4 It is better to measure something than to calculate it.
- 5 Good measurements cost money. Bad ones cost more!
- 6 Be very critical of all data.
- 7 Use end points (e.g. p_i) as anchor points, to guide your interpretation.
- 8 Interpolate with no fear. Extrapolate only based on mechanistic models.
- 9 What the recorder sees, is not always what the reservoir sees.
- 10 Wellbore transients will dominate over reservoir transients.
- 11 Examine the PPD to differentiate between WELLBORE and RESERVOIR effects.
- 12 No matter how complex the reservoir is – be it fractured, multi-layered (with equal p_i), bounded, multi-permeability, etc... a buildup (in Cartesian coordinates) will ALWAYS be continuously concave downward (for a single phase fluid).
- 13 Draw a wellbore schematic. PTA refers to sandface pressures NOT recorder pressures.
- 14 When possible, run a gradient survey BEFORE and AFTER a test.
- 15 Run gradient survey to lowest perforation.
- 16 Read the field notes. Compare wellhead tubing / casing pressures (and temperature) to those of the bottomhole recorder.
- 17 If you torture data long enough it will confess to anything!
- 18 Even temperature has secrets to reveal.
- 19 Remember, the computer is only a calculator, not an interpreter.
- 20 **KEEP IT SIMPLE!**

Golden Testing Manual:

Handbook of Psychological Testing Paul Kline, 2013-11-12 Since publication in its first edition the Handbook of Psychological Testing has become the standard text for organisational and educational psychologists. It offers the only comprehensive modern and clear account of the whole of the field of psychometrics. It covers psychometric theory, the different kinds of psychological test, applied psychological testing and the evaluation of the best published psychological tests. It is outstanding for its detailed and complete coverage of the field, its clarity even for the non-mathematical, and its emphasis on the practical application of psychometric theory in psychology and education as well as in vocational, occupational and clinical fields. For this second edition the Handbook has been extensively revised and updated to include the latest research and thinking in the field. Unlike other work in this area it challenges the scientific rigour of conventional psychometrics and identifies groundbreaking new ways forward.

Includes formal testing, interviews and behavioral observation as testing measures. Details assessments for intelligence, aptitude, achievement, personality and psychopathology. New coverage of assessments used in forensic psychology. New coverage on assessments with ethnic minorities.

In addition, California Verbal Learning, CVLT and CVLT II, CERAD List Learning and selective Reminding Tests as well as the newest version of the Wechsler Memory Scale, WMS III and WMS IIIA are reviewed. Locator tables throughout the book guide the reader to the sets

of normative data that are best suited to each individual case depending on the demographic characteristics of the patient and highlight the advantages associated with using data for comparative purposes Those using the book have the option of reading the authors critical review of the normative data for a particular test or simply turning to the appropriate data locator table for a quick reference to the relevant data tables in the Appendices The Second Edition includes reviews of 15 new tests The way the data are presented has been changed to make the book easier to use Meta analytic tables of predicted values for different ages and education where relevant are included for nine tests that have a sufficient number of homogeneous datasets No other reference offers such an effective framework for the critical evaluation of normative data for neuropsychological tests Like the first edition the new edition will be welcomed by practitioners researchers teachers and graduate students as a unique and valuable contribution to the practice of neuropsychology
