Although there are several excellent books covering a few of the specialized areas of photobiology at the present time there is no book that covers all areas of the science of photobiology This book attempts to fill this void The science of photobiology is currently divided into 14 subspecialty areas by the American Society for Photobiology The first 14 chapters of this book deal with those subspecialty areas each written by a leader in the field Chapter 15 entitled New Topics in Photobiology highlights areas of research that may be designated subspecialties of photobiology in the future This book has been written as a textbook to introduce the science of photobiology to advanced undergraduate and graduate students The chapters are written to provide a broad overview of each topic They are designed to contain the amount of information that might be presented in a one to two hour general lecture The references are not meant to be exhaustive but key references are included to give students an entry into the literature Frequently a more recent reference that reviews the literature will be cited rather than the first paper by the author making the original discovery Whenever practical a classroom demonstration or simple laboratory exercise has been provided to exemplify one or more major points in a chapter **Laser Science and Technology** A.N. The conference Laser Science and Technology was held May 11 19 1987 in Erice Sicily This was the 12th conference organized by the International School of Quantum Electronics under the auspices of the Ettore Majorana Center for Scientific Culture This volume contains both the invited and contributed papers presented at the

conference covering current research work in two areas new laser sources and laser applications The operation of the first laser by Dr Theodore Maiman in 1960 initiated a decade of scientific exploration of new laser sources This was followed by the decade of the 1970s which was characterized by technology push in which the discoveries of the 1960s were seeking practical application In the 1980s we are instead seeking applications pull in which the success and rapid maturing of laser applications provides both inspiration and financial resources to stimulate additional work both on laser sources and applications The papers presented in these Proceedings attest to the great vitality of research in both these areas New Laser Sources The papers describe current developments in ultra violet excimer lasers X ray lasers and free electron lasers These new lasers share several characteristics each is a potentially important coherent source each is at a relatively short wavelength below 1 micrometer and each is receiving significant development attention today
