**Problem 14A****ELECTROMAGNETIC WAVES****PROBLEM**

The atoms in an  $\text{HCl}$  molecule vibrate (like two charged balls attached to the ends of a spring). If the wavelength of the emitted electromagnetic wave is  $3.75 \mu\text{m}$ , what is the frequency of the vibration?

**SOLUTION**

Given  $\lambda = 3.75 \times 10^{-6} \text{ m}$   
 $v = 3.00 \times 10^8 \text{ m/s}$

Unknown  $f = ?$

Use the wave-speed equation, and solve for  $\lambda$ .

$$c = f\lambda$$

$$f = \frac{c}{\lambda} = \frac{3.00 \times 10^8 \text{ m/s}}{3.75 \times 10^{-6} \text{ m}} = \boxed{8.00 \times 10^{13} \text{ Hz}}$$

**ADDITIONAL PRACTICE**

1. New-generation cordless phones use a  $9.00 \times 10^2 \text{ MHz}$  frequency and can be operated up to 60.0 m from their base. How many wavelengths of the electromagnetic waves can fit between your car and a base 60.0 m away?
2. The highest directly measured frequency is  $3.28 \times 10^{14} \text{ Hz}$ , corresponding to one of the transitions in cadmium-112. How many wavelengths of electromagnetic waves with this frequency could fit across a dot on a book page? Assume the dot is  $3.80 \times 10^{-3} \text{ m}$  in diameter.
3. Commercial trucks cause about 18 000 lane-change and merging accidents per year in the United States. To prevent many of them, a warning system covering blind spots is being developed. The system uses electromagnetic waves of frequency  $2.40 \times 10^{10} \text{ Hz}$ . What is the wavelength of these waves?
4. A typical compact disc stores information in tiny pits on the disc's surface. A typical pit size is 1.2  $\mu\text{m}$ . What is the frequency of electromagnetic waves that have a wavelength equal to the typical CD pit size?
5. A new architectural technique detects the differences in electromagnetic waves emitted by humans and by weapons made of metal, plastic, or ceramic. One possible range of wavelengths used with this technique is from 2.0 mm to 3.0 mm. Calculate the associated range of frequencies.
6. The U.S. Army's heaviest landspike is almost 17 m across and is transported on a special trailer. The sound is produced by an electromagnetic coil that can generate a minimum frequency of 30.8 Hz. What is the wavelength of these electromagnetic waves?

**Holt Physics** ,2001      Holt Physics Raymond A. Serway,2002      **Advanced Physics for You** Keith Johnson,Simmone Hewett,Sue Holt,John Miller,2000 Designed to be motivating to the student this title includes features that are suitable for individual learning It covers the AS Level and core topics of almost all A2 specifications      *Stochastic Dynamics of Crystal Defects* Thomas D Swinburne,2015-07-13 This thesis is concerned with establishing a rigorous modern theory of the stochastic and dissipative forces on crystal defects which remain poorly understood despite their importance in any temperature dependent micro structural process such as the ductile to brittle transition or irradiation damage The author first uses novel molecular dynamics simulations to parameterise an efficient stochastic and discrete dislocation model that allows access to experimental time and length scales Simulated trajectories are in excellent agreement with experiment The author also applies modern methods of multiscale analysis to extract novel bounds on the transport properties of these many body systems Despite their successes in coarse graining existing theories are found unable to explain stochastic defect dynamics To resolve this the author defines crystal defects through projection operators without any recourse to elasticity By rigorous dimensional reduction explicit analytical forms are derived for the stochastic forces acting on crystal defects allowing new quantitative insight into the role of thermal fluctuations in crystal plasticity      *Single-Ion Solvation* Philippe Hunenberger,Maria Reif,2011-04-18 Ions are ubiquitous in chemical technological ecological and biological processes Characterizing their role in these processes in the first place requires the evaluation of the thermodynamic parameters associated with the solvation of a given ion However due to the constraint of electroneutrality the involvement of surface effects and the ambiguous connection between microscopic and macroscopic descriptions the determination of single ion solvation properties via both experimental and theoretical approaches has turned out to be a very difficult and highly controversial problem This unique book provides an up to date compact and consistent account of the research field of single ion solvation thermodynamics that has over one hundred years of history and still remains largely unsolved By reviewing the various approaches employed to date establishing the relevant connections between single ion thermodynamics and electrochemistry resolving conceptual ambiguities and giving an exhaustive data compilation in the context of alkali and halide hydration this book provides a consistent synthesis in depth understanding and clarification of a large and sometimes very confusing research field The book is primarily aimed at researchers professors postgraduates graduates and industrial researchers concerned with processes involving ionic solvation properties these are ubiquitous eg in physical organic analytical chemistry electrochemistry biochemistry pharmacology geology and ecology Because of the concept definitions and data compilations it contains it is also a useful reference book to have in a university library Finally it may be of general interest to anyone wanting to learn more about ions and solvation Key features discusses both experimental and theoretical approaches and establishes the connection between them provides both an account of the past research covering over one

hundred years and a discussion of current directions in particular on the theoretical side involves a comprehensive reference list of over 2000 citations employs a very consistent notation including table of symbols and unambiguous definitions of all introduced quantities provides a discussion and clarification of ambiguous concepts ie concepts that have not been defined clearly or have been defined differently by different authors leading to confusion in past literature encompasses an exhaustive data compilation in the restricted context of alkali and halide hydration along with recommended values after critical analysis of this literature data is illustrated by a number of synoptic colour figures that will help the reader to grasp the connections between different concepts in one single picture

### **Singularly Perturbed Boundary Value Problems**

Matteo Dalla Riva, Massimo Lanza de Cristoforis, Paolo Musolino, 2021-10-01 This book is devoted to the analysis of the basic boundary value problems for the Laplace equation in singularly perturbed domains The main purpose is to illustrate a method called Functional Analytic Approach to describe the dependence of the solutions upon a singular perturbation parameter in terms of analytic functions Here the focus is on domains with small holes and the perturbation parameter is the size of the holes The book is the first introduction to the topic and covers the theoretical material and its applications to a series of problems that range from simple illustrative examples to more involved research results The Functional Analytic Approach makes constant use of the integral representation method for the solutions of boundary value problems of Potential Theory of the Theory of Analytic Functions both in finite and infinite dimension and of Nonlinear Functional Analysis Designed to serve various purposes and readerships the extensive introductory part spanning Chapters 1-7 can be used as a reference textbook for graduate courses on classical Potential Theory and its applications to boundary value problems The early chapters also contain results that are rarely presented in the literature and may also therefore attract the interest of more expert readers The exposition moves on to introduce the Functional Analytic Approach A reader looking for a quick introduction to the method can find simple illustrative examples specifically designed for this purpose More expert readers will find a comprehensive presentation of the Functional Analytic Approach which allows a comparison between the approach of the book and the more classical expansion methods of Asymptotic Analysis and offers insights on the specific features of the approach and its applications to linear and nonlinear boundary value problems

Fritz Gesztesy, 2007 This Festschrift had its origins in a conference called SimonFest held at Caltech March 27-31 2006 to honor Barry Simon's 60th birthday It is not a proceedings volume in the usual sense since the emphasis of the majority of the contributions is on reviews of the state of the art of certain fields with particular focus on recent developments and open problems The bulk of the articles in this Festschrift are of this survey form and a few review Simon's contributions to a particular area Part 1 contains surveys in the areas of Quantum Field Theory Statistical Mechanics Nonrelativistic Two Body and N Body Quantum Systems Resonances Quantum Mechanics with Electric and Magnetic Fields and the Semiclassical Limit Part 2 contains surveys in the areas of Random

and Ergodic Schrodinger Operators Singular Continuous Spectrum Orthogonal Polynomials and Inverse Spectral Theory In several cases this collection of surveys portrays both the history of a subject and its current state of the art A substantial part of the contributions to this Festschrift are survey articles on the state of the art of certain areas with special emphasis on open problems This will benefit graduate students as well as researchers who want to get a quick yet comprehensive introduction into an area covered in this volume
