Sullivan, 2020-12-01 The first American woman to walk in space

recounts her experience as part of the team that launched, rescued, repaired and maintained the Hubble Space Telescope. The Hubble Space Telescope has revolutionized our understanding of the universe. It has, among many other achievements, revealed thousands of galaxies in what seemed to be empty patches of sky, transformed our knowledge of black holes, found dwarf planets with moons orbiting other stars, and measured precisely how fast the universe is expanding. In *Handprints on Hubble*, retired astronaut Kathryn Sullivan describes her work on the NASA team that made all this possible. Sullivan, the first American woman to walk in space, recounts how she and other astronauts, engineers, and scientists launched, rescued, repaired, and maintained Hubble, the most productive observatory ever built. Along the way, Sullivan chronicles her early life as a Sputnik Baby, her path to NASA through oceanography, and her initiation into the space program as one of thirty-five new guys. She was also one of the first six women to join NASA's storied astronaut corps. She describes in vivid detail what liftoff feels like inside a spacecraft, it's like being in an earthquake and a fighter jet at the same time, shows us the view from a spacewalk, and recounts the temporary grounding of the shuttle program after the Challenger disaster. Sullivan explains that maintainability was designed into Hubble, and she describes the work of inventing the tools and processes that made on-orbit maintenance possible. Because in-flight repair and upgrade was part of the plan, NASA was able to fix a serious defect in Hubble's mirrors, leaving literal and metaphorical handprints on Hubble. *Handprints on Hubble* was published with the support of the MIT Press Fund for Diverse Voices.

Justice and food security in a changing climate Hanna Schübel, Ivo Wallimann-Helmer, 2023-08-14

The UN's Sustainable Development Goals saw the global community agree to end hunger and malnutrition in all its forms by 2030. However, the number of chronically undernourished people is increasing continuously. Ongoing climate change and the action needed to adapt to it are very likely to aggravate this situation by limiting agricultural land and water resources and changing environmental conditions for food production. Climate change and the actions it requires raise questions of justice, especially regarding food security. These key concerns of ethics and justice for food security due to climate change challenges are the focus of this book, which brings together work by scholars from a wide range of disciplines and a multitude of perspectives. These experts discuss the challenges to food security posed by mitigation, geoengineering, and adaptation measures that tackle the impacts of climate change. Others address the consequences of a changing climate for agriculture and food production and how the Covid-19 pandemic has affected food security and animal welfare.
