Segregation's Science Gregory Michael Dorr,2008-11-29 Blending social intellectual legal medical gender and cultural history Segregation s Science Eugenics and Society in Virginia examines how eugenic theory and practice bolstered Virginia s various cultures of segregation rich from poor sick from well able from disabled male from female and black from white and Native American Famously articulated by Thomas Jefferson ideas about biological inequalities among groups evolved throughout the nineteenth century By the early twentieth century proponents of eugenics the science of racial improvement melded evolutionary biology and incipient genetics with long standing cultural racism The resulting theories taught to generations of Virginia high school college and medical students became social policy as Virginia legislators passed eugenic marriage and sterilization statutes The enforcement of these laws victimized men and women labeled feeble-minded African Americans and Native Americans for over forty years However this is much more than the story of majority agents dominating minority subjects Although white elites were the first to champion eugenics by the 1910s African American Virginians were advancing their own hereditarian ideas creating an effective counter narrative to white scientific racism Ultimately segregation s science contained the seeds of biological determinism s undoing realized through the civil women s Native American and welfare rights movements Of interest to historians educators biologists physicians and social workers this study reminds readers that science is socially constructed the syllogism Science is objective objective things are moral therefore science is moral remains as potentially dangerous and misleading today as it was in the past

How We Teach Science John L. Rudolph,2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works Everyone also agrees that students and the public more generally should

understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they ve advanced an assortment of strategies ranging from the laboratory method to the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation and scientific inquiry was seen to contribute to an individual s intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public *Scientific Papers of Asa Gray: Essays, biographical sketches, 1841-1886* Asa Gray,1889 Catalogue of Scientific Papers, 1800-1900: Physics. pt. 1.
