Manufacturing In The Era Of 4th Industrial Revolution: A World Scientific Reference (In 3 Volumes)

,2021-01-13 The era of the fourth industrial revolution has fundamentally transformed the manufacturing landscape Products are getting increasingly complex and customers expect a higher level of customization and quality Manufacturing in the Era of 4th Industrial Revolution explores three technologies that are the building blocks of the next generation advanced manufacturing The first technology covered in Volume 1 is Additive Manufacturing AM AM has emerged as a very popular manufacturing process The most common form of AM is referred to as three dimensional 3D printing Overall the revolution of additive manufacturing has led to many opportunities in fabricating complex customized and novel products As the number of printable materials increases and AM processes evolve manufacturing capabilities for future engineering systems will expand rapidly resulting in a completely new paradigm for solving a myriad of global problems The second technology is industrial robots which is covered in Volume 2 on Robotics Traditionally industrial robots have been used on mass production lines where the same manufacturing operation is repeated many times Recent advances in human safe industrial robots present an opportunity for creating hybrid work cells where humans and robots can collaborate in close physical proximities This Cobots or collaborative robots has opened up to opportunity for humans and robots to work more closely together Recent advances in artificial intelligence are striving to make industrial robots more agile with the ability to adapt to changing environments and tasks Additionally recent advances in force and tactile sensing enable robots to be used in complex manufacturing tasks These new capabilities are expanding the role of robotics in manufacturing operations and leading to significant growth in the industrial robotics area The third technology covered in Volume 3 is augmented and virtual reality Augmented and virtual reality AR VR technologies are being leveraged by the manufacturing community to improve operations in a wide variety of ways Traditional applications have included operator training and design visualization with more recent applications including interactive design and manufacturing planning human and robot interactions ergonomic analysis information and knowledge capture and manufacturing simulation The advent of low cost solutions in these areas is accepted to accelerate the rate of adoption of these technologies in the manufacturing and related sectors Consisting of chapters by leading experts in the world Manufacturing in the Era of 4th Industrial Revolution provides a reference set for supporting graduate programs in the advanced manufacturing area **Medical Robotics** Vanja

Bozovic,2008-01-01 The first generation of surgical robots are already being installed in a number of operating rooms around the world Robotics is being introduced to medicine because it allows for unprecedented control and precision of surgical instruments in minimally invasive procedures So far robots have been used to position an endoscope perform gallbladder surgery and correct gastroesophageal reflux and heartburn The ultimate goal of the robotic surgery field is to design a robot that can be used to perform closed chest beating heart surgery The use of robotics in surgery will expand over the next decades without any doubt Minimally Invasive Surgery MIS is a revolutionary approach in surgery In MIS the operation is

performed with instruments and viewing equipment inserted into the body through small incisions created by the surgeon in contrast to open surgery with large incisions This minimizes surgical trauma and damage to healthy tissue resulting in shorter patient recovery time The aim of this book is to provide an overview of the state of art to present new ideas original results and practical experiences in this expanding area Nevertheless many chapters in the book concern advanced research on this growing area The book provides critical analysis of clinical trials assessment of the benefits and risks of the application of these technologies This book is certainly a small sample of the research activity on Medical Robotics going on around the globe as you read it but it surely covers a good deal of what has been done in the field recently and as such it works as a valuable source for researchers interested in the involved subjects whether they are currently medical roboticists or not
