- Calculate the area and circumference of a circle.
- Apply the relationship between the radius of a circle and an arc length.

Radians and mathematics typically measure the angle θ in radians rather than degrees, which is defined as

This second formula is another way to write the definition of circumference with s being an arc that completes an entire circle and r being the radius of the circle. That means that 2π must be the angle of the entire circle.

doi:10.1017/S002229240000209

In fact, the radius of a circle can be thought of as a convenient factor between the angular position θ and the arc length s :

$$1 \text{ radian} = 1 \text{ radian} \left(\frac{57.3}{1} \right) = 57.3^\circ$$
