

# IONIC BONDING

Name \_\_\_\_\_

Ionic bonding occurs when a metal transfers one or more electrons to a nonmetal in an effort to attain a stable octet of electrons. For example, the transfer of an electron from sodium to chlorine can be depicted by a Lewis dot diagram.

Calcium would need two chlorine atoms to get rid of its two valence electrons.

Show the transfer of electrons in the following combinations.

1. K + F

2. Mg + I

3. Be + S

4. Na + O

5. Al + Br

**Chemistry for Nonchemists** Frank R. Spellman, 2006 To effectively deal with any chemical based problem including pollution environmental health and safety professionals must have at least a rudimentary understanding of the basic concepts of chemistry Chemistry for Nonchemists Principles and Applications for Environmental Practitioners book provides such professionals with an introductory reference that will help them to understand the fundamental principles of chemistry and to understand those principles as they apply to the environmental compliance programs that regulate workplace activity Written for anyone whose work involves environmental management planning impact assessment protection or compliance or whose responsibilities include designing implementing and evaluating a health and safety program Chemistry for Nonchemists provides a detailed overview of chemistry and its

principles chemical nomenclature chemical reactions and their application to regulatory compliance programs under the various environmental health and safety laws This book will help readers understand the laws of chemistry and the ramifications of out of control chemistry Publisher s description *The Etymology of Chemical Names* ,2019-10-08 Etymology of Chemical Names gives an overview of the development of the current chemical nomenclature tracing its sources and changing rules as chemistry progressed over the years This book is devoted to provide a coherent picture how the trivial and systematic names shall be used and how the current IUPAC rules help to reconcile the conflicting demands

Elk,2004-05-20 As a byproduct of historical development there are different unrelated systems of nomenclature for inorganic chemistry organic chemistry polymer chemistry natural products chemistry etc With each new discovery in the laboratory as well as each new theoretical proposal for a chemical the lines that traditionally have separated these distinct subsets of matter continually grow more blurred This lack of uniformity in characterizing and naming chemicals increases the communication difficulties between differently trained chemists as well as other scientists and greatly impedes progress With the set of known chemicals numbering over 42 000 000 in Chemical Abstracts data base and continually growing about 2 000 new additions every day the desirability for a unified system for naming all chemicals simultaneously grows Moreover in order to meet the requirements of disparate groups of scientists and of society in general the name assigned to a given chemical should not only uniquely describe that substance but also should be a part of a readily recognizable order for the entire field For these purposes a topology based bi parametric system of nomenclature is herein proposed In this book a new nomenclature system is proposed The new nomenclature is applicable to a three dimensional world and is internally consistent This nomenclature unifies ALL branches of chemistry removing the need for various presently existing sets of rules **Handbook of Industrial Hydrocarbon Processes** James G. Speight,2010-12-24 Written by an author with over 38 years of experience in the chemical and petrochemical process industry this handbook will present an analysis of the process steps used to produce industrial hydrocarbons from various raw materials It is the first book to offer a thorough
