The system is designed to operate in several 100-2000 Hz ranges only. It can also operate in the audio range at any other points desired. The manufacturer designed the radio to be a vacuum tube type operating. The radio should be converted to an IC radio like it is stated that "the fact doesn't let an IC radio be controlled by a wall switch. When the power is on the radio is always on. The radio is without battery supply, you can increase the time without changing the radio. To increase the life of the radio, it is best to use the radio continuously in a 100-2000 Hz range only." **Abstract:** The purpose of this study was to determine the effect of a 12-week, low-intensity, low-impact, and low-impact aerobically and resistance training program on the physical fitness of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were 30 sedentary, middle-aged women who were randomly assigned to either a control group or an exercise group. The exercise group performed a 12-week, low-intensity, low-impact, and low-impact aerobically and resistance training program. The control group did not exercise. The results of the study showed that the exercise group had significantly higher levels of physical fitness than the control group at the end of the 12-week program. The exercise group had significantly higher levels of aerobic fitness, muscular strength, and muscular endurance than the control group. The exercise group also had significantly higher levels of body composition, including lower body fat percentage and higher lean body mass. The results of this study suggest that a 12-week, low-intensity, low-impact, and low-impact aerobically and resistance training program can improve the physical fitness of sedentary, middle-aged women.
