

PUSHING

Vehicles Equipped with Automatic Transmission — If your car is equipped with an automatic transmission it cannot be started by pushing. Use a booster battery or jumper cables from the battery of another car.

Vehicles Equipped with Manual Transmission — If your engine cannot be started manually, a push from another car will usually get you going, providing the battery isn't "dead". Since a sudden, forward surge often occurs when the engine starts, having your car towed to "start" the engine is not advisable.

Turn the ignition key on, fully depress the clutch and shift to high gear. Hold the accelerator pedal about half way down, when car speed reaches 10 MPH, slowly release the clutch pedal to start the engine.

TO OPERATE THE CAR

TOWING (Vehicle Impounded)

Make sure the parking brakes are released and the transmission gears are in neutral. It is important to know that the transmission and rear axle are in proper working order before pushing or towing. To move a car with an impervious axle, it is necessary to raise the rear wheels. If the transmission is impervious, the driveshaft must be removed or the rear wheels raised, whichever is more convenient.

If the car being towed has an automatic transmission and is moving with the rear wheels on the ground, do not exceed 20 MPH, or a distance of 25 miles. If this is not possible it is advisable to tow the car with the rear wheels raised off the ground or with the driveshaft disconnected from the rear axle.

EMERGENCY STARTING

Use of Battery Booster and Jumper Cables

To start a car with a "run-down" battery, hook the jumper cables to the booster battery first. Be sure to connect the positive (+) terminals of the batteries through one cable (usually red) and the negative terminals through the other. Any other procedure will damage the charging system and could result in personal injury caused by electrolyte spurring out of the cells.

Keep face away from the top of open battery cells. Combustible gas is always present.
