Gilbert Welch, Lisa Schwartz, Steve Woloshin, 2012-01-03 A nationally recognized expert offers a searing expos of Big Pharma and the American healthcare system s zeal for excessive medical testing More screening doesn t lead to better health but can turn healthy people into patients Going against the conventional wisdom reinforced by the medical establishment and Big Pharma that more screening is the best preventative medicine Dr Gilbert Welch builds a compelling counterargument that what we need are fewer not more diagnoses Documenting the excesses of American medical practice that labels far too many of us as sick Welch examines the social ethical and economic ramifications of a health care system that unnecessarily diagnoses and treats patients most of whom will not benefit from treatment might be harmed by it and would arguably be better off without screening Drawing on 25 years of medical practice and research on the effects of medical testing Welch explains in a straightforward jargon free style how the cutoffs for treating a person with abnormal test results have been drastically lowered just when technological advances have allowed us to see more and more abnormalities many of which will pose fewer health complications than the procedures that ostensibly cure them Citing studies that show that 10% of 2 000 healthy people were found to have had silent strokes and that well over half of men over age sixty have traces of prostate cancer but no impairment Welch reveals overdiagnosis to be rampant for numerous conditions and diseases including diabetes high cholesterol osteoporosis gallstones abdominal aortic aneurysms blood clots as well as skin prostate breast and lung cancers With genetic and prenatal screening now common patients are being diagnosed not with disease but with pre disease or for being at high risk of developing disease Revealing the economic and medical forces that contribute to overdiagnosis Welch makes a reasoned call for change that would save us from countless unneeded surgeries excessive worry and exorbitant costs all while maintaining a balanced view of both the potential benefits and harms of diagnosis Drawing on data clinical studies and anecdotes from his own practice Welch builds a solid accessible case against the belief that more screening always improves
