challenging the reader to think critically and develop a personal stance toward the subject *3D Geo-Information Sciences* Jiyeong Lee, Siyka Zlatanova, 2008-10-24 In recent years 3D geo information has become an important research area due to the increased complexity of tasks in many geo scientific applications such as sustainable urban planning and development civil engineering risk and disaster management and environmental monitoring Moreover a paradigm of cross application merging and integrating of 3D data is observed The problems and challenges facing today s 3D software generally application oriented focus almost exclusively on 3D data transportability issues the ability to use data originally developed in one modelling visualisation system in other and vice versa Tools for elaborated 3D analysis simulation and prediction are either missing or when available dedicated to specific tasks In order to respond to this increased demand a new type of system has to be developed A fully developed 3D geo information system should be able to manage 3D geometry and topology to integrate 3D geometry and thematic information to analyze both spatial and topological relationships and to present the data in a suitable form In addition to the simple geometry types like point line and polygon a large variety of parametric representations freeform curves and surfaces or sweep shapes have to be supported Approaches for seamless conversion between 3D raster and 3D vector representations should be available they should allow analysis of a representation most suitable for a specific application **The Passivhaus Handbook** Janet Cotterell, Adam

Dadeby, 2012-11-30 As we move towards the 2016 zero carbon target in house building Passivhaus construction looks like becoming not just popular in the UK but commonplace This is a no nonsense and engaging introduction on how to do it KEVIN MCCLOUD The Passivhaus Handbook is an essential guide for anyone wanting to realise a supremely comfortable healthy and durable home with exceptionally low energy costs Passivhaus design focuses on getting the building fabric right to achieve ultra low energy consumption cost effectively The approach is relevant to a wide range of building types and climates Its methodology can be combined with elements of other building standards such as the UK s Code for Sustainable Homes CSH or with other sustainable building goals such as a commitment to using low impact or natural building materials Whether you are building an extension retrofitting your house or starting from scratch and whether you are new to low energy design or already have some experience this book will help you navigate around the potential pitfalls and

misconceptions It brings together current thinking and best practice The book includes a clear explanation of the underlying building physics and terminology as well as detailed information on key elements of Passivhaus avoiding air leakage designing thermal cold bridges moisture management and ventilation strategy There is also lots of practical advice on setting up a project including developing a motivated project team and a discussion of economic considerations and the policy context in the UK As pressure on global resources increases and energy prices continue to rise the Passivhaus approach proven over 20 years meets the challenge of ultra low energy building for the future
