nut and washer on each side of the support. Temporarily, hand tighten the two locknuts against each other.

17- Depress the choke linkage on the carburetor. Push the barrel at the end of the choke cable into the slotted hole in the choke linkage.

18- Adjust the position of the two locknuts to give an acceptable amount of slack in the cable, and then tighten the locknuts against each other to hold the cable in place on the support bracket.

Repeat these last three steps for the throttle cable.

If either cable has stretched, or has become kinked or frayed, or tends to stick, the entire cable should be replaced.

19- Connect the fuel supply hose to the lower of the two fittings on the carburetor.

Carburetor Priming

The carburetor must be primed before starting the engine to save the battery from excessive cranking.

20- Place a shop towel under the fuel return hose fitting. Squeeze the hose until fuel starts to drip from the fuel return fitting on the carburetor. The carburetor is now full of fuel and the engine is ready for cranking after the hose has been reconnected.
