Design for a Sustainable Circular Economy Gavin Brett Melles, Christian Wölfel, 2023-12-29 This multi authored book aims to illustrate the social economic and ecological factors that should determine and be determined by design in the implementation of a sustainable circular economy and society We take design to refer to a continuum of perspectives and applications from industrial design to policy design and this broad perspective invites theoretical and methodological contributions from a range of fields In addition to bringing scholarly diversity to circularity we expand and challenge the mainstream circular economy narrative of material efficiencies and green growth to include the demands of inclusive growth and ecological boundaries consistent with sustainable development Readers from within and beyond design conscious of the limitations of circular green growth will find new inspiration in this book regarding the nature of a sustainable circular economy and society and the broad design agenda that must be implemented to enable a just and informed circular transition

Linear Functional Equations. Operator Approach Anatolij Antonevich, 1996-01-26

In this book we shall study linear functional equations of the form $m \text{ bu } x \text{ Lak } X \text{ U } Qk \text{ X } f \text{ x } 1 \text{ k } l$ where U is an unknown function from a given space $F \text{ X}$ of functions on a set X $Qk \text{ X } X$ are given mappings ak and f are given functions Our approach is based on the investigation of the operators given by the left hand side of equation 1 In what follows such operators will be called functional operators We will pay special attention to the spectral properties of functional operators first of all to invertibility and the Noether property Since the set X the space $F \text{ X}$ the mappings Qk and the coefficients ak are arbitrary the class of operators of the form 1 is very rich and some of its individual representatives are related with problems arising in various areas of mathematics and its applications In addition to the classical theory of functional equations among such areas one can indicate the theory of functional differential equations with deviating argument the theory of nonlocal problems for partial differential equations the theory of boundary value problems for the

equation of a vibrating string and equations of mixed type a number of problems of the general theory of operator algebras and the theory of dynamical systems the spectral theory of automorphisms of Banach algebras and other problems
