How can the coefficients in a chemical equation be interpreted?

NATALIA
LACAYO
P. 2

Why?

A balanced chemical equation can tell us the number of reactant and product particles (ions, atoms, molecules or formula units) that are necessary to conserve mass during a chemical reaction. Typically when we balance the chemical equation we think in terms of individual particles. However, in real life the reaction represented by an equation occurs an unimaginable number of times. Short of writing very large numbers (10^{23} or larger) in front of each chemical in the equation, how can we interpret chemical equations so that they more realistically represent what is happening in real life? In this activity you will explore the different ways a chemical reaction can be interpreted.

Model 1 – A Chemical Reaction

1. Consider the reaction in Model 1.

a. What are the coefficients for each of the following substances in the reaction?

1 N_2

3 H_2

2 NH_3

b. Draw particle models below to illustrate the reaction in Model 1.

2. Consider each situation below as it relates to the reaction in Model 1.

a. Calculate the amount of reactants consumed and products made.

b. Record the ratio of N_2 to H_2 to NH_3 . Reduce the ratio to the lowest whole numbers possible.

	N_2 Consumed	H_2 Consumed	NH_3 Produced	Ratio $\text{N}_2:\text{H}_2:\text{NH}_3$ (reduced)
For a single reaction, how many molecules of each substance would be consumed or produced?	1	3	2	1:3:2
If the reaction occurred one hundred times, how many molecules would be consumed or produced?	100	300	200	1:3:2
If the reaction occurred 538 times, how many molecules would be consumed or produced?	538	1614	1076	1:3:2

the bestselling co author of *Raising Cain* addresses America's performance driven obsession with the accomplishments of its kids and provides a deeply humane response. How was school? These three words contain a world of desire on the part of parents to know what their children are learning and experiencing in school each day. Children may not divulge much but psychologist Michael Thompson suggests that the answers are there if we know how to read the clues and equally important if we remember our own school days. School, Thompson reminds us, occupies more waking hours than kids spend at home and school is full not just of studies but of human emotion: excitement, fear, envy, love, anger, sexuality, boredom, competitiveness. Through richly detailed interviews, case histories, and student e-mail journals including those of his own children, Thompson illuminates the deeper psychological journey that school demands: a journey that all children must take in order to grow and develop, whether they are academic aces or borderline dropouts. Most of us remember this journey if we are honest with ourselves, but our children must experience it in their own way, for better or worse. In stories that are by turns poignant, shocking, uplifting, and inspiring, we see students grapple with the textured reality of their lives, devising their own unique strategies to survive and thrive in school. For parents, this book reveals the hidden emotional landscape of the school day and points toward the answers we both desire and dread as we seek to help our children find success in school and beyond. Bridging the worlds of the growing and the grown up, and told in Thompson's compassionate voice as both psychologist and father, *The Pressured Child* shows us how to listen for the truth of our children's experience and how to trust, love, and ultimately let go of a child. It is a crucial book for our stressful age and an ideal resource for families struggling to survive it.
