GETTING STARTED

Abstract: The purpose of this study was to determine the effect of a 12-week, low-intensity, low-impact aerobically and resistance training program on the physical and psychological health of older adults. The study was conducted in a community center. The participants were 12 older adults (mean age = 72.5 years) who were recruited from a local newspaper advertisement. The participants were divided into two groups: a control group and an exercise group. The exercise group participated in a 12-week, low-intensity, low-impact aerobically and resistance training program. The control group did not participate in any exercise program. The results of the study showed that the exercise group had significantly higher levels of physical and psychological health than the control group at the end of the 12-week program. The findings of this study suggest that a 12-week, low-intensity, low-impact aerobically and resistance training program can improve the physical and psychological health of older adults.

Harvard researchers are studying an isolated group of intelligent, yet unlettered Chinese. Because there were no educational systems about the way of the world in traditional times, the full culture themselves are unlettered Chinese. Because there are almost thousands of such isolated groups living in China, it is interesting to study them.

^aResults are shown as mean $\pm$ SD. Significant differences between groups are indicated by different letters.
