## **Electronics Cad Lab Manual:**

**Lab Manual for Electronic Devices, Global Edition** THOMAS L. FLOYD, 2018-06-19 This laboratory manual is carefully coordinated to the text *Electronic Devices Tenth edition Global edition* by Thomas L Floyd. The seventeen experiments correspond to the chapters in the text except the first experiment references Chapters 1 and the first part of Chapter 2. All of the experiments are subdivided into two or three Parts. With one exception, Experiment 12 B, the Parts for the all experiments are completely independent of each other. The instructor can assign any or all Parts of these experiments and in any order. This format provides flexibility depending on the schedule, laboratory time available, and course objectives. In addition, experiments 12 through 16 provide two options for experiments. These five experiments are divided into two major sections identified as A or B. The A experiments continue with the format of previous experiments; they are constructed with discrete components on standard protoboards as used in most electronic teaching laboratories. The A experiments can be assigned in programs where traditional devices are emphasized. Each B experiment has a similar format to the corresponding A experiment but uses a programmable Analog Signal Processor (ASP) that is controlled by free Computer Aided Design (CAD) software from the Anadigm company ([www.anadigm.com](http://www.anadigm.com)). These experiments support the Programmable Analog Design feature in the textbook. The B experiments are also subdivided into independent Parts, but Experiment 12 B Part 1 is a software tutorial and should be performed before any other B experiments. This is an excellent way to introduce the ASP technology because no other hardware is required other than a computer running the downloaded software. In addition to Experiment 12 B, the first 13 steps of Experiment 15 B Part 2 are also tutorial in nature for the AnadigmFilter program. This is an amazing active filter design tool that is easy to learn and is included with the AnadigmDesigner2 AD2 CAD software. The ASP is part of a Programmable Analog Module (PAM) circuit board from the Servenger company ([www.servenger.com](http://www.servenger.com)) that interfaces to a personal computer. The PAM is controlled by the AD2 CAD software from the Anadigm company website. Except for Experiment 12 B Part 1, it is assumed that the PAM is connected to the PC and AnadigmDesigner2 is running. Experiment 16 B Part 3 also requires a spreadsheet program such as Microsoft Excel. The PAM is described in detail in the Quick Start Guide Appendix B. Instructors may choose to mix A and B experiments with no loss in continuity depending on course objectives and time. We recommend that Experiment 12 B Part 1 be assigned if you want students to have an introduction to the ASP without requiring a hardware purchase. A text feature is the Device Application (DA) at the end of most chapters. All of the DAs have a related laboratory exercise using a similar circuit that is sometimes simplified to make laboratory time as efficient as possible. The same text icon identifies the related DA exercise in the lab manual. One issue is the trend of industry to smaller surface mount devices which are very difficult to work with and are not practical for most lab work. For example, almost all varactors are supplied as surface mount devices now. In reviewing each experiment, we have found components that can illustrate the device function with a traditional one. The traditional through-hole MV2109 varactor

is listed as obsolete but will be available for the foreseeable future from Electronix Express [www.elexp.com](http://www.elexp.com) so it is called out in Experiment 3 All components are available from Electronix Express [www.elexp.com](http://www.elexp.com) as a kit of parts see list in Appendix A The format for each experiment has not changed from the last edition and is as follows Introduction A brief discussion about the experiment and comments about each of the independent Parts that follow Reading Reading assignment in the Floyd text related to the experiment Key Objectives A statement specific to each Part of the experiment of what the student should be able to do Components Needed A list components and small items required for each Part but not including the equipment found at a typical lab station Particular care has been exercised to select materials that are readily available and reusable keeping cost at a minimum Parts There are two or three independent parts to each experiment Needed tables graphs and figures are positioned close to the first referenced location to avoid confusion Step numbering starts fresh with each Part but figures and tables are numbered sequentially for the entire experiment to avoid multiple figures with the same number Conclusion At the end of each Part space is provided for a written conclusion Questions Each Part includes several questions that require the student to draw upon the laboratory work and check his or her understanding of the concepts Troubleshooting questions are frequently presented Multisim Simulation At the end of each A experiment except 1 one or more circuits are simulated in a Multisim computer simulation New Multisim troubleshooting problems have been added to this edition Multisim troubleshooting files are identified with the suffix f1 f2 etc in the file name standing for fault1 fault2 etc Other files with nf as the suffix include demonstrations or practice using instruments such as the Bode Plotter and the Spectrum Analyzer A special icon is shown with all figures that are related to the Multisim simulation Multisim files are found on the website [www.pearsonglobaledition.com](http://www.pearsonglobaledition.com) Floyd Microsoft PowerPoint slides are available at no cost to instructors for all experiments The slides reinforce the experiments with troubleshooting questions and a related problem and are available on the instructor s resource site Each laboratory station should contain a dual variable regulated power supply a function generator a multimeter and a dual channel oscilloscope A list of all required materials is given in Appendix A along with information on acquiring the PAM As mentioned components are also available as a kit from Electronix Express the kit number is 32DBEDFL10 *Laboratory Manual for Use with Electricity and Electronics* Dale R. Estimate the Thermal and Mechanical Characteristics of Electronics Systems A definitive guide for practitioners new to the

field or requiring a refresher course Practical Guide to the Packaging of Electronics Thermal and Mechanical Design and Analysis Third Edition provides an understanding of system failures and helps identify the areas where they can occur Specifically designed for the mechanical electrical or quality engineer the book addresses engineering issues involved in electronics packaging and provides the basics needed to design a new system or troubleshoot a current one Updated to reflect recent developments in the field this latest edition adds two new chapters on acoustic and reliability fundamentals and contains more information on electrical failures and causes It also includes tools for understanding heat transfer shock and vibration Additionally the author Addresses various cross discipline issues in the design of electromechanical products Provides a solid foundation for heat transfer vibration and life expectancy calculations Identifies reliability issues and concerns Develops the ability to conduct a more thorough analysis for the final design Includes design tips and guidelines for each aspect of electronics packaging Practical Guide to the Packaging of Electronics Thermal and Mechanical Design and Analysis Third Edition explains the mechanical and thermal fluid aspects of electronic product design and offers a basic understanding of electronics packaging design issues Defining the material in depth it also describes system design guidelines and identifies reliability concerns for practitioners in mechanical electrical or quality engineering Electronic Design Automation Frameworks Franz J. Rammig, Flavio Wagner, 2013-04-17 Design frameworks have become an important infrastructure for building complex design systems Electronic Design Automation Frameworks presents a state of the art review of the latest research results covering this topic results which are also of value for other design frameworks The book contains the selected proceedings of the Fourth International Working Conference on Electronic Design Frameworks organized by the International Federation for Information Processing and held in Gramado Brazil in November 1994

**Electronic Design Automation Frameworks** Tom Rhyne, 1992 Many of the advances achieved in framework technology during the last five years are reported in this volume However despite acknowledged developments and an enormous investment by the Computer Aided Design CAD vendor industry and others commercial framework products have been slow to appear on the market Further those which have appeared have largely failed to meet original targets whether in terms of scope or performance or both Reaching a consensus on new international standards has been a painfully slow process with rapid advances in technology often rendering new standards out of date even before their eventual appearance A motivation for agreement on technical issues not yet fully understood or researched will be vital if a commercial basis to underpin future development is to be achieved It is hoped this book will stimulate interchange between researchers developers and users so that practical progress can be made backed by the strong support of interested industries
