Numerical Methods for Two-Point Boundary-Value Problems Herbert B. Keller, 2018-11-14 Elementary yet rigorous this concise treatment explores practical numerical methods for solving very general two point boundary value problems The approach is directed toward students with a knowledge of advanced calculus and basic numerical analysis as well as some background in ordinary differential equations and linear algebra After an

introductory chapter that covers some of the basic prerequisites the text studies three techniques in detail initial value or shooting methods finite difference methods and integral equations methods Sturm Liouville eigenvalue problems are treated with all three techniques and shooting is applied to generalized or nonlinear eigenvalue problems Several other areas of numerical analysis are introduced throughout the study The treatment concludes with more than 100 problems that augment and clarify the text and several research papers appear in the Appendixes Advanced and Multivariate Statistical Methods
Craig A. Mertler, Rachel A. Vannatta, 2016-10-24 Ideal for non math majors Advanced and Multivariate Statistical Methods teaches students to interpret present and write up results for each statistical technique without overemphasizing advanced math This highly applied approach covers the why what when and how of advanced and multivariate statistics in a way that is neither too technical nor too mathematical Students also learn how to compute each technique using SPSS software New to the Sixth Edition Instructor ancillaries are now available with the sixth edition All SPSS directions and screenshots have been updated to Version 23 of the software Student learning objectives have been added as a means for students to target their learning and for instructors to focus their instruction Key words are reviewed and reinforced in the end of chapter material to ensure that students understand the vocabulary of advanced and multivariate statistics
