*Eco-Innovation and Green Productivity for Sustainable Production and Consumption, 2nd edition* Munir Ahmad, Cem Işık, Zeeshan Fareed, 2025-09-12

With the graduation of time the desire for enhanced production and consumption scales motivated the global economies to opt for the race to the bottom approach leading to environmental unsustainability On the one hand economies focused on escalated production levels proliferating non renewable energy consumption and reducing energy productivity leading to production based carbon dioxide CO<sub>2</sub> emissions On the other hand international trade of high CO<sub>2</sub> emissions embedded goods has skyrocketed the consumption based CO<sub>2</sub> emissions Since production and consumption based CO<sub>2</sub> emissions challenge environmental sustainability there is an urgent need to pursue sustainable production and consumption to realize the United Nations Sustainable Development Goals SDGs dream In this regard eco innovation came into play to transition the conventional production setup to a cleaner production mode Eco innovation involves all types of technological advancements extending contributions to the SDGs In this regard climate technologies and environmental technologies involving renewable energy e g wind solar biogas energy efficient technologies e g energy efficient electric appliances environmental pollution reduction technologies e g carbon scrubbing filters water purifiers waste mitigation technologies play a tremendous role in mitigating climatic adversities and environmental unsustainabilities By contributing to the responsible use of natural capital eco innovation facilitates efficient energy utilization improving energy productivity as well as environmental sustainability Moreover eco innovation has the inherent potential to aggravate sustainable production modes through green productivity a tool to enhance industrial outputs with fewer harms to the environment As a progressive move green productivity growth promotes a new trend of producing more economic output by consuming fewer resources and safeguarding ecosystems The mainstream empirical literature substantiated that eco innovation and green productivity remained critical players in limiting CO<sub>2</sub> emissions and promoting environmental sustainability Literature also witnessed that eco innovation ameliorated energy

productivity by motivating the countries to adopt cost saving and environmentally friendly technologies On the contrary the rebound effect supported the environmental deterioration impact of such technologies Against this backdrop this Research Topic will provide an opportunity to further delve into the influencing mechanisms triggered by eco innovation and green productivity growth on energy productivity and environmental sustainability for a futuristic perspective of sustainable production and consumption This Research Topic welcomes theoretical and empirical original research articles and reviews Research themes and areas include but are not limited to the following Links between eco innovation green productivity growth and energy productivity for sustainable production Climate technologies and carbon neutrality applications for sustainable production Firm level environment related innovation practices Renewable and energy efficient industrial transition for sustainable production Eco innovation through the firm life cycle for sustainable production and consumption Green innovation driven business models for sustainable production Climate technology driven policies for sustainable production and consumption Eco innovation and zero emissions agenda implementation *Carbon Neutrality, Social Media, Artificial Intelligence, volume II* Rita Yi Man Li,Xuefeng Shao,James Crabbe,2023-10-20 Carbon neutrality refers to net zero carbon emissions It can be achieved by reducing carbon emissions or increasing carbon adsorption The popularity of social media including Twitter YouTube and LinkedIn provides good channels for sharing relevant information and promoting sustainable carbon neutral living styles For example a motor company has launched social media challenges with Korean pop stars to raise awareness of carbon neutrality Social media provides real time information In Jakarta flood related tweet intensity during a flood peaked at about 900 tweets a minute during the floods of 2015 The tweets created real time maps that people sent a minute before Regarding government policies identification of problem areas is needed to help policymakers to resolve problems Machine learning can monitor these events by studying past records to know how countries and governments performed in a high risk event or environmental crisis and this data can be used to provide future recommendations to governments for policy making Additionally AI can analyze online unstructured data and predict various scenarios of carbon emissions and adsorptions using structured data The world of social media is a huge data source still yet to be fully optimized in science The nexus between innovation and environmental sustainability Shaojian Wang,Jose Balsa-Barreiro,Yingcheng Li,Jianjun Tu,2023-04-28 **Environmental Software Systems** Ralf Denzer,David A. Swayne,Gerald Schimak,2016-03-24 Environmental Informatics is a fast growing field which deals with all methods from computer science environmental planning ecology and related subjects As well as being an interdisciplinary area Environmental Informatics provides an interface between all involved professional groups Monitoring the state of the environment analysing existing data presenting the data to scientists and the public as well as providing decision support are only some of the topics involved Environmental Informatics is therefore a good foundation for the computer assisted protection of the environment **Sustainability of Digital Transformation for the Environment** Evgeny
