In the future, global problems and issues will require an in-depth understanding of chemistry to have a global solution. This book aims at bridging the concepts and theory of chemistry with examples from fields of practical application, thus reinforcing the connection between science and engineering. It deals with the basic principles of various branches of chemistry, namely physical chemistry, inorganic chemistry, organic chemistry, analytical chemistry, surface chemistry, biochemistry, geochemistry, fuel chemistry, polymer chemistry, cement chemistry, materials chemistry, and asphalt chemistry. Freshwater Fish Heimo Mikkola, 2024-11-27

There are at least 14,350 freshwater fish species in the world living in lakes and rivers with a salinity level of less than 1.05%. In 2021, it was estimated that one-third of the global freshwater fish species are at risk of extinction. Therefore, conservation issues are crucial, as is the decision whether to allow alien species to improve the production or instead concentrate on the well-being of the native species. At the same time, it is necessary to remember that as food fish are an important human resource. In this book, we have chapters presenting the fish species from Africa, Europe, and North and South America. Therefore, we have cold water, cool water, and warm water species. Stock assessments are critical in developing management plans for specific lakes and regions. Citizen sciences apps are a necessary tool for helping fisheries management biologists and researchers.

Fundamentals of Environmental and Toxicological Chemistry Stanley E. Manahan, 2013-02-25

Fundamentals of Environmental and Toxicological Chemistry Sustainable Science Fourth Edition covers university-level environmental chemistry with toxicological chemistry integrated throughout the book. This new edition of a bestseller provides an updated text with an increased emphasis on sustainability and green chemistry. It is organized based on the five spheres of Earth's environment: 1 the hydrosphere (water), 2 the atmosphere (air), 3 the geosphere (solid Earth), 4 the biosphere (life), and 5 the anthrosphere (the part of the environment made and used by humans). The first chapter defines environmental chemistry, and each of the five environmental spheres. The second chapter presents the basics of toxicological chemistry and its relationship to environmental chemistry. Subsequent chapters are grouped by sphere, beginning with the hydrosphere and its environmental chemistry, water pollution, sustainability, and water as nature's most renewable resource. Chapters then describe the atmosphere, its structure and importance for protecting life on Earth, air pollutants, and the sustainability of atmospheric quality. The author explains the nature of the geosphere and discusses soil for growing food, as well as geosphere sustainability. He also describes the biosphere and its sustainability. The final sphere described is the anthrosphere. The text

explains human influence on the environment including climate pollution in and by the anthrosphere and means of sustaining this sphere It also discusses renewable nonpolluting energy and introduces workplace monitoring For readers needing additional basic chemistry background the book includes two chapters on general chemistry and organic chemistry This updated edition includes three new chapters new examples and figures and many new homework problems **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),
