Problem solving activities in post-editing and translation from scratch

Jean Nitzke, 2019 Companies and organisations are increasingly using machine translation to improve efficiency and cost effectiveness and then edit the machine translated output to create a fluent text that adheres to given text conventions This procedure is known as post editing Translation and post editing can often be categorised as problem solving activities When the translation of a source text unit is not immediately obvious to the translator or in other words if there is a hurdle between the source item and the target item the translation process can be considered problematic Conversely if there is no hurdle between the source and target texts the translation process can be considered a task solving activity and not a problem solving activity This study investigates whether machine translated output influences problem solving effort in internet research syntax and other problem indicators and whether the effort can be linked to expertise A total of 24 translators twelve professionals and twelve semi professionals produced translations from scratch from English into German and monolingually post edited machine translation output for this study The study is part of the CRITT TPR DB database The translation and monolingual post editing sessions were recorded with an eye tracker and a keylogging program The participants were all given the same six texts two texts per task Different approaches were used to identify problematic translation units First internet research behaviour was considered as research is a distinct indicator of problematic translation units Then the focus was placed on syntactical structures in the MT output that do not adhere to the rules of the target language as I assumed that they would cause problems in the monolingual post editing tasks that would not occur in the translation from scratch task Finally problem indicators were identified via different parameters like Munit which indicates how often the participants created and modified one translation unit or the inefficiency InEff value of translation units i.e. the number of produced and deleted tokens divided by the final length of the translation Finally the study highlights how these parameters can be used to identify problems in the translation process data using mere keylogging data The

An Historical Syntax of the English Language F.Th. Visser,2023-05-08 Frederik Theodor Visser s An Historical Syntax of the English Language published in four massive volumes between 1963 and 1973 is certainly one of the cornerstones of research in English linguistics Visser s achievements can hardly be overestimated Before the advent of modern corpus linguistics he compiled a remarkable wealth of detailed philological data from all periods of English and combined this with current grammatical analyses of his time This has made this publications an indispensable resource for anyone investigating the history of English syntax This reproduction of Visser s volumes is more than welcome and timely as the volumes have been out of print for quite some time and were sometimes a little bit difficult to navigate Having a searchable and easy to use online version although maybe not perfect available now means a revival for scholarship that celebrates its fiftieth birthday without losing any of its relevance Impact of Independent Contractor Reclassification on Small Business United States.

in order to guarantee a consistent reprint and pricing policy for the future the work should be available henceforth only as a set of four volumes
