The Cell Cycle

What controls the life and development of a cell?

What?

As most people are aware, the controlling factor in a system – in this case the body, a group of cells – the cells, the DNA within say "tells us which and when to grow." For multicellular organisms, different types of cells have different roles and need to replicate specific cells. For example, a cell that isn't large enough to get caught the moving bloodstream the body has to tell that it has to get big and get caught the bloodstream through a new capillary. In this scenario, new cells have done the work of a cell's life, and for each tissue, controlled how frequently they're made.

Model 1 – The Cell Cycle

1. How many phases are in the cell cycle as shown in the diagram in Model 1?
2. Starting in the G1 phase, what is the order of the stages of a cell's life?
3. Choosing which phase from the start of the cell's life?
4. Choosing which phase from the middle of the cell's life?
