Design and Analysis of Ecological Experiments Samuel M. Scheiner, Jessica Gurevitch, 2001-04-26 Ecological research and the way that ecologists use statistics continues to change rapidly This second edition of the best selling *Design and Analysis of Ecological Experiments* leads these trends with an update of this now standard reference book with a discussion of the latest developments in experimental ecology and statistical practice The goal of this volume is to encourage the correct use of some of the more well known statistical techniques and to make some of the less well known but potentially very useful techniques available Chapters from the first edition have been substantially revised and new chapters have been added Readers are introduced to statistical techniques that may be unfamiliar to many ecologists including power analysis logistic regression randomization tests and empirical Bayesian analysis In addition a strong foundation is laid in more established statistical techniques in ecology including exploratory data analysis spatial statistics path analysis and meta analysis Each technique is presented in the context of resolving an ecological issue Anyone from graduate students to established research ecologists will find a great deal of new practical and useful information in this current edition

Ecology, Systematics, and the Natural History of Predaceous Diving Beetles (Coleoptera: Dytiscidae) Donald A. Yee, 2014-07-14 Predaceous diving beetles Coleoptera Dytiscidae constitute one of the largest families of freshwater insects 4 200 species Although dytiscid adults and larvae are ubiquitous throughout a variety of aquatic habitats and are significant predators on other aquatic invertebrates and vertebrates there are no compilations that have focused on summarizing the knowledge of their ecology systematics and biology Such knowledge would benefit anyone working in aquatic systems where dytiscids are an important part of the food web Moreover this work will allow a greater appreciation of dytiscids as model organisms for investigations of fundamental principles derived from ecological and evolutionary theory Contributed chapters are by authors who are actively engaged in studying dytiscids and each chapter offers a synthesis of the current knowledge of a variety of topics and will provide future directions for research *Mangrove Ecosystems: A Global Biogeographic Perspective* Victor H. Rivera-Monroy, Shing Yip Lee, Erik Kristensen, Robert R. Twilley, 2017-11-03 This book presents a comprehensive overview and analysis of mangrove ecological processes structure and function at the local biogeographic and global scales and how these properties interact to provide key ecosystem services to society The analysis is based on an international collaborative effort that focuses on regions and countries holding the largest mangrove resources and encompasses the major biogeographic and socio economic settings of mangrove distribution Given the economic and ecological importance of mangrove wetlands at the global scale the chapters aim to integrate ecological and socio economic perspectives on mangrove function and management using a system level hierarchical analysis framework The book explores

the nexus between mangrove ecology and the capacity for ecosystem services with an emphasis on thresholds multiple stressors and local conditions that determine this capacity The interdisciplinary approach and illustrative study cases included in the book will provide valuable resources in data information and knowledge about the current status of one of the most productive coastal ecosystem in the world
