

Respiration Article & Follow-Up Questions

CELLULAR RESPIRATION

All living things need energy to survive and carry out life processes. Whether an organism makes its own food through photosynthesis or eats another organism for food, all organisms* use the same process to turn their food into usable energy. This process is called *cellular respiration*.

Mitochondrion

Cellular respiration is a chemical reaction that happens in an organelle called the *mitochondrion* (plural: mitochondria). Mitochondria are found in the cells of nearly every organism on Earth. While almost all cells in the human body contain mitochondria, cells that require a lot of energy, such as muscle cells, can contain hundreds or thousands of them.

All organisms need a source of food, in the cellular respiration. Plants are performing photosynthesis to make glucose. Cells use glucose for energy. They break it down into smaller molecules like pyruvate. Pyruvate enters the mitochondrion and is broken down into carbon dioxide and water. This process releases energy in the form of ATP. The energy is used for various cellular processes. The waste products, carbon dioxide and water, are released from the cell. Carbon dioxide is used by plants for photosynthesis. Water is used by plants for transpiration. Excess water may leave the plant stomata in a process called transpiration.

Cellular respiration is a complex process that occurs in several stages. It begins with glycolysis, which occurs in the cytoplasm. Glycolysis breaks down glucose into pyruvate. Pyruvate then enters the mitochondrion, where it is broken down into carbon dioxide and water. This process releases energy in the form of ATP. The energy is used for various cellular processes. The waste products, carbon dioxide and water, are released from the cell. Carbon dioxide is used by plants for photosynthesis. Water is used by plants for transpiration. Excess water may leave the plant stomata in a process called transpiration.

*There are some exceptions to this. Some organisms in extreme environments use a different process to generate energy.
