The primary goal of the *Information Protection Playbook* is to serve as a comprehensive resource for information protection (IP) professionals who must provide adequate information security at a reasonable cost. It emphasizes a holistic view of IP, one that protects the applications, systems, and networks that deliver business information from failures of confidentiality, integrity, availability, trust, and accountability, and privacy. Using the guidelines provided in the *Information Protection Playbook*, security and information technology (IT) managers will learn how to implement the five functions of an IP framework: governance, program planning, risk management, incident response management, and program administration. These functions are based on a model promoted by the Information Systems Audit and Control Association (ISACA) and validated by thousands of Certified Information Security Managers. The five functions are further broken down into a series of objectives or milestones to be achieved in order to implement an IP framework. The extensive appendices included at the end of the book make for an excellent resource for the security or IT manager building an IP program from the ground up. They include, for example, a board of directors presentation complete with sample slides, an IP policy document,
