EXTENDING FROM 1D TO 2D: FUNCTIONS
A COMMON CORE STATE STANDARD A.2

Most eighth grade mathematics curricula cover the concept of a function. This level of the progression presented in mathematics, the definition of a function is simply in the point of being really understood. Make sure to know the following definition:

Definition: A function is any "rule" that assigns exactly one output value to each input value (number). These rules can be understood in different ways, the most common being equations, graphs, tables, and verbal rules. We call the input variable *independent* and output variable *dependent*.

Example 18: The national ocean service offers a plan whereby every day a fisher gets the right of 50 and can then download maps for 50 cents each.

1a) What are the independent and dependent variables in this situation?

Independent: _____
Dependent: _____

1b) What variable better like a variety of independent values?

Number of Downloads, x	0	5	10	20
Amount charged, y				

1c) Let the number of downloads be represented by the variable x and the amount charged in dollars be represented by the variable y . Write an equation that models y as a function of x .

1d) Based on the equation you found in part (c), produce a graph of the function for all values of x on the interval $0 \leq x \leq 50$. Use a calculator, table, or generate additional coordinate pairs to the ones you found in part (b).
